Chang,2007-10-04 Corporate information is skyrocketing in business values for enterprise what is best practice for developing and maintaining goals and standards to enhance

information management and business operations The growing need to incorporate and exchange information across networks has driven corporations to establish infrastructure for high distribution communities in a timely and safe manner Service Oriented Enterprise SOE is lauded as a mainstream business information collaboration solution due to its decentralized loosely coupled and highly interoperable nature Through SOE composite applications can be created modified and removed in a dynamic use of services This allows corporate information to be abstracted from existing applications and data and creating new possibilities for assets to be either provided by external platforms or provisioned from external sources Within a business commercial paradigm SOE translates to a set of flexible services and processes that an organization wishes to make available to its customers partners and or associates From a technical perspective SOE evolves existing integration concepts into the notion of a contract a technology neutral and business specific representation of the function The history of the term network centrality has represented different perceptions in the realm of enterprise services In such traditional Information Technology IT domains as the telecommunications industry networking has comprised a complex and expensive asset management effort for service carriers Network operators are consistently challenged to manage technologies and associated procedures that are continually growing and changing Efficiency of resource management via network centrality has widely been regarded as a cornerstone of business assurance ix x Preface
