Recent Trends and Applications of Leguminous Microgreens as Functional Foods Piyush Mathur, Astha Gupta, 2025-01-17 Microgreens are the name given to the small, soft green parts of plants that develop from seedlings and do not bear any real leaves. These microgreens are known to have high nutritional content and are composed of phytoconstituents such as carotenoids, phenolics, and polysterols, which allow for their usage in dietary programs. Legumes provide high nutritional value by enhancing dietary fibre, vitamins, and minerals, and are one of the most important sources of plant protein in the human diet. Leguminous microgreens can play a significant role in fulfilling the nutritional requirement of the world's population and will assist in completing the United Nations global goal of zero hunger. Sustainable Development Goal 2. *Recent Trends and Applications of Leguminous Microgreens as Functional Foods* provides an in-depth look at the development of leguminous microgreens such as chickpea, lentils, beans, and peas. It covers potential germplasm containing high iron and zinc levels, biomass, and nutritive traits that can be used to produce a bio-fortified functional food with appropriate proportions of nutritive components. The book also discusses the increasing interest in production and consumption of microgreens due to their nutritional content, yield rate, rapid production time frame, and aroma qualities among other factors. The book also covers management methods for production of biofortified food through conventional molecular and biotechnological approaches such as hydroponics and

aquaponics systems Additionally it contains assessments on safety during storage as well information on how to develop value added products that can supplement food needs requirements This book is a valuable tool for anyone looking to gain a comprehensive understanding of this growing sector within agriculture and will provide readers with all they need to know about developing leguminous microgreens for enriched functional foods *Head Start Nutrition Education Curriculum*

Pometto III,Ali Demirci,2015-08-24 In nature microorganisms are generally found attached to surfaces as biofilms such as dust insects plants animals and rocks rather than suspended in solution Once a biofilm is developed other microorganisms are free to attach and benefit from this microbial community The food industry which has a rich supply of nutrients solid surfaces and raw materials constantly entering and moving through the facility is an ideal environment for biofilm

development which can potentially protect food pathogens from sanitizers and result in the spread of foodborne illness

Biofilms in the Food Environment is designed to provide researchers in academia federal research labs and industry with an understanding of the impact control and hurdles of biofilms in the food environment Key to biofilm control is an understanding of its development The goal of this 2nd edition is to expand and complement the topics presented in the original book Readers will find The first comprehensive review of biofilm development by *Campylobacter jejuni* An up date on the resistance of *Listeria monocytogenes* to sanitizing agents which continues to be a major concern to the food industry An account of biofilms associated with various food groups such as dairy meat vegetables and fruit is of global concern A description of two novel methods to control biofilms in the food environment bio nanoparticle technology and bacteriophage

Biofilms are not always a problem sometimes they even desirable In the human gut they are essential to our survival and provide access to some key nutrients from the food we consume The authors provide up date information on the use of biofilms for the production of value added products via microbial fermentations Biofilms cannot be ignored when addressing a foodborne outbreak All the authors for each chapter are experts in their field of research The Editors hope is that this second edition will provide the bases and understanding for much needed future research in the critical area of Biofilm in Food Environment
