## SPRING BREAK PACKET

### Reading Comprehension

The background features a collage of yellow sunflowers and a blue reading packet titled "Renewable Energy: Our Key to Combating Global Warming". The packet contains several paragraphs of text and a list of questions. The text discusses the benefits of renewable energy sources like solar, wind, and hydroelectric power in reducing greenhouse gas emissions and combating global warming. The questions are multiple-choice and short-answer format.

**Renewable Energy: Our Key to Combating Global Warming**

1. To battle global warming, adopting renewable energy sources is more than just a choice—it's a necessity. Renewable energy comes from natural resources that never run out, such as sunlight, wind, and water. Unlike fossil fuels like coal, oil, and natural gas, which produce much of the carbon dioxide that is changing our climate, renewable energy sources produce very little pollution. By harnessing these clean energy sources, we can power our world without causing harm to ourselves and our planet.

2. Solar power is a leading form of renewable energy. Solar panels capture sunlight and transform it into electricity. They can be installed in various places, from vast solar power plants to ordinary rooftops. Solar energy is cheap and abundant, and it does not produce any planet-warming pollution.

3. Wind power is another key player in renewable energy. Wind turbines, with their spinning structures and sweeping blades, convert the energy of the wind into electricity. Areas with consistent winds, like coastlines and open plains, are ideal for wind farms. By utilizing wind energy, we contribute to the reduction of global warming effects.

4. Hydroelectric power uses the energy of flowing water to generate electricity. We capture this hydropower by building dams along rivers. While hydroelectric power doesn't produce any pollution, constructing dams and hydroelectric power plants can disrupt river ecosystems and harm fish and other wildlife.

5. Other forms of renewable energy, though less common, also play a role in reducing our fossil fuel use. Geothermal energy, derived from the Earth's internal heat, and tidal energy, created by the gravitational pull of the moon and sun on the oceans, are two examples. They can be very effective in some parts of the world.

6. The use of renewable energy that we use, and the power from non-polluting sources, is one of the best ways to reduce greenhouse gas emissions. As we harness these natural resources, the dream of a clean energy future becomes increasingly attainable. With renewable energy, we can move a step closer to stopping global warming and creating a better world for all.
