General information

Spring hangers and supports are delivered on pallets. Ensure careful handling during transport on site. The corrosion protection, the connecting threads, manufacturer's plate and scales are especially at risk. Storage should be in closed rooms; if stored in the open air the devices should be protected from moisture and dirt with suitable coverings.

Connections

To fasten the hangers / support to the load bearing structure, the required connections must be prepared; welding plates, clamping lugs for the hanging versions FHD, FHG and FDT; supports (perforated) or support plates for the base-mounted types FHS, FSS and FSP and brackets for the sway supports.

Function

Spring hangers and supports carry forces from the pipe support to the load-bearing structure over a specific travel range. The hangers/ supports are set to the required load at the factory (fitting unblocked devices is not recommended).

Installation

Hangers must be connected in a form-closed way with the connections; support bolts must be secured with cotter pins or safety rings, thread connections with lock nuts.

Load connection/load adjustment

Hanger with turnbuckle

The lower tie rod (threaded rod) must first be screwed in to the turnbuckle of the hanger and connected with the load to be carried (note system dimension E of the turnbuckle, lubricate both threads of the turnbuckle well in advance and screw on safety nuts first).

The length of the lower tie rod is to be adapted to the real installation dimensions if necessary. The turnbuckle is turned until the intended cold load is reached. (The set cold load can be read on the travel scale on the engraved or blue triangle.) This point is reached when on both sides the travel stops become loose through the existing play and can be easily removed by hand. (Remove transport lock first.) In the case of a larger thread diameters (for example from around M 42) the turnbuckles cannot be adjusted under load; they must be relieved of the load using additional aids (lifting tool, hydraulic lift).

Double hanger with traverse (FDT)

As described above; ensure the load is even on both tie rods.

Hanger without turnbuckle (FHS).

Turn the adjustment nut until the intended cold load is reached (previously lubricate thread). Continue as above.

Supports size 01-11

Insert the load plate with flange loosely. Turning the support pipe (previously lubricate thread) tensions it (adjustment option + 30 mm). With supports from size 08 the load plate should be relieved of the load using suitable aids (such as lifting tool, hydraulic lift).

Supports size 12-16 (FSS; FSP)

Insert the load plate with thread part loosely. Turning the adjustment nut (previously lubricate thread) tensions it (adjustment option + 30 mm). With supports from size 08 the load plate should be relieved of the load using suitable aids (such as lifting tool, hydraulic lift).
