Electronic String Art

Stephen Erfle, 2024-02-20 String art is a well known and popular activity that uses string a board and nails to produce artistic images although there are variations that use different modalities This activity is beloved because simple counting rules are used to create beautiful images that can both adorn walls and excite young minds The downside of this highly tactile activity is that it is quite time consuming and rigid By contrast electronic string art offers much more flexibility to set up or change nail locations and counting rules and the images created from those changes change instantaneously Electronic String Art Rhythmic Mathematics invites readers to use the author's digital resources available on the ESA website to play with the parameters inherent in string art models while offering concise accessible explanations of the underlying mathematical principles regarding how the images were created and how they change Readers will have the opportunity to create visually beautiful works of art while learning concepts from geometry number theory and modular arithmetic from approximately 200 short interdependent sections Features Readers are able to drill down on images in order to understand why they work using short 1 to 2 page stand alone sections Sections are lessons that were created so that they could be digested in a single sitting These sections are stand alone in the sense that they need not be read sequentially but can be referred to based on images that the reader finds interesting An open ended inherently flexible teaching resource for elementary middle and high school level mathematics The most mathematically challenging sections or portions of a section are designated MA and may not be accessible to elementary and middle school readers Will be appreciated by anyone interested in recreational mathematics or mathematical artworks even if the users are not interested in the underlying mathematics Includes exercises solutions and

many online digital resources These QR codes take you to these digital resources One takes you directly to the web version of the string art model used as a starting point for teaching the parameters of the model in Section 25.5 The other takes you to the ESA web page with additional links to a variety of resources

development to the complexities thrown up by evolutionary developmental biology where explanation is altered by multidisciplinary itself They cover major domains such as ecology and systems biology as well as contemporary trends such as the mechanistic explanations spawned by progress in molecular biology With contributions from researchers of many different nationalities the book provides a many angled perspective on a revealing feature of the discipline of biology

Open Access Mickey Abel, 2011-12-08 Open Access Contextualizing the Archivolted Portals of Northern Spain and Western France within the Theology and Politics of Entry explores the history development and accrued connotations of a distinctive entry configuration comprised of a set of concentrically stepped archivolt surrounding a deliberate tympanum free portal opening These archivolted portals adorned many of the small rural ecclesiastical structures dotting the countryside of western France and northern Spain in the twelfth century Seeking to re contextualize this configuration within monastic meditational practices this book argues that the ornamented archivolt were likely composed following medieval prescriptions for the rhetorical ornamentation of poetry and employed the techniques of mnemonic recollection and imaginative visualization Read in this light it becomes clear that the architectural form underlying these semi circular configurations served to open the possibilities for meaning by making the sculptural imagery physically and philosophically accessible to both the monastic community and the lay parishioner Pointing to an Iberian heritage in which both light and space had long been manipulated in the conveyance of theological and political ideologies Abel suggests that the portal s architectural form grew out of a physical and social matrix characterized by pilgrimage crusade and processions where the elements of motion integral to the Quadrivium sciences of Math Geometry Astronomy and Music were enhanced by a proximity to and cultural interaction with the Islamic courts of Spain It was however within the politics of the Peace of God movement with its emphasis on relic processions that often encompassed all the parishes of the monastic domain that the archivolted portal with its elevated porch like space are shown to be the most effective
