

Lab Report

The lab report will be written in a format that reflects the nature of the course. Since this is an experimental course where you will be performing experiments, collecting data on these experiments and finally analyzing your data; the lab reports should be written in a manner that will convey what was done in the experiment and then relate the data to the physical concepts that are being explored in the lab.

In this lab course we will use the model of the current acceptable format used in the physics literary journals. In particular we will model the format specified by the Journal of Chemical Physics.

The format for the *J. Chem. Phys.* is:

Title (Centered Top of Page)

Be creative do NOT use the same name provided by the lab manual

Abstract (Centered below title, do not need to write the word abstract)

A brief couple of sentences that describes what you did, why you did it and what you got. Should be no more than a short paragraph.

Introduction

Should explain why you are performing the experiment, what you are trying to find and the theory involved in the experiment. If you list formulas in this section you should define all the constants being used in the formulas and also label the formulas as follows and refer to them such as Formula 1 if referring to them later in the text.

$$y = mx + b \quad (1)$$

Experiment

This section will be a description of what was physically done in the lab. It should be in your own words and in paragraph form. If you measure a quantity remember to always list the units along with the physical number.

Results and Discussion

This is the most important section of the lab report. Here you will present and explain your data. If you were asked to measure for instance the gravitational constant 'g', you should specify the result you got, compare your result to the theoretically accepted value and find the percent difference between the two values. Furthermore, you should then evaluate whether or not your value has an acceptable percent difference and account for the divergence from the accepted value.

Conclusions

This should be the section where you say whether or not the experiment was successful and what it showed.

National Bureau of Standards, 1968 **Transitions in Writing**, 2018-03-12 Transitions in Writing addresses the experiences of writers as they move between contexts of writing and juggle new and different demands Spelman Miller and Stevenson bring together research by scholars in a range of settings across the world who approach transition from different standpoints Transition is often conceived of as a change in setting coinciding with physical or temporal relocation such as between stages of an educational or professional career However writers also manage more local micro level transitions as they move between genres registers and rhetorical moves to meet the demands of the task The combination of both macro and micro level perspectives on transition offers a novel broad conception of the types of change a writer encounters and illustrates a range of methodological approaches appropriate to exploring such transitions *Landmark Essays on Writing Across the Curriculum* Charles Bazerman, David Russell, 2020-11-25 Rhetoric as a general teaching while preaching locality of action and guidelines for handling that locality has tended from the beginning to serve as a universality It has offered a generalized techne with only limited categories appropriate for all discursive situations at least for those that were not excluded from the realm of rhetoric Nonetheless from its beginnings rhetoric limited its interests to certain activity fields such as law government religion and most important the educators of leaders in these activity fields This collection presents landmarks showing where the Writing Across the Curriculum WAC and Writing in the Disciplines WID movements have gone They have opened up a number of prospects that were impossible to see when rhetoric and composition confined their gaze to relatively few discursive activities This suggests

that the rhetorical landscape is becoming more complex and interesting as well as more responsive to life in the complex differentiated societies that have emerged in the last few centuries This volume will reveal to scholars and researchers a range of possibilities for the study of disciplinary discourse and its teaching and suggest to them new prospects for the future and for the better
