Should key events in historical developments of areas of knowledge always be judged by the standards of their time?

Development of knowledge is shaped by a combination of various historical processes and events. These processes and events help us to understand why knowledge was construed in a particular way at a definite point in time, and why attitudes and perceptions about certain areas of knowledge changed over time. This brings into fore the notion of relativism, which has enabled the modern society to use objective standards in judging the historical events that shaped knowledge development in the past. Because different cultures and generations of the human race have had different perspectives and points of view, they applied different standards in the development. Thus, there are debates about whether past standards should be used to judge historical developments of knowledge.

According to Stanley (2002, 242), new areas of knowledge can be developed and existing ones shaped by understanding key events and historical processes that led to the current knowledge. Each historical event had a different impact depending on how the generations that existed at the time viewed the world. The perceptions of each generation were in effect influenced by the cultural values and ideals of the people. Therefore, it is certain that different cultures and generations applied different standards in judging similar events. If the current generations were to apply the same standards that were applied in the past, they will arrive at different and mostly overlapping interpretations of the same phenomenon, which would distort knowledge.

Essay Sample #2 - Theory of Knowledge Essay Example

One area of knowledge where past generations have applied different standards is physics. It is a known fact that until a few centuries ago, humanity possessed an inaccurate understanding of the solar system. Across cultures, it was believed that the sun rotated around the earth. The past cultures used different standards to arrive at this flawed reasoning, which was a fundamental truth at the time (Littmann, 2004, 163). Today, it has been proved beyond the slightest doubt that the sun does not rotate around the earth. In essence, it is the earth that rotates around the sun. Therefore, if the current generations were to apply the same standards that were used in the past to study the solar system, they will make incorrect inferences, which will result in great distortion of knowledge.

The above argument can be applied to other areas of knowledge such as psychology. For example, among some ancient communities, it was believed that mental illnesses were caused by acts of witchcraft. Therefore, magic potions were widely used to treat mental patients and to protect normal people from being bewitched (Koyanagi and Goldman, 1991, 901). Modern studies in psychology

Epistemic Consequentialism H. Kristoffer Ahlstrom-Vij, Jeffrey Dunn, 2018-05-03 An important issue in epistemology concerns the source of epistemic normativity Epistemic consequentialism maintains that epistemic norms are genuine norms in virtue of the way in which they are conducive to epistemic value whatever epistemic value may be So for example the epistemic consequentialist might say that it is a norm that beliefs should be consistent in that holding consistent beliefs is the best way to achieve the epistemic value of accuracy Thus epistemic consequentialism is structurally similar to the family of consequentialist views in ethics Recently philosophers from both formal epistemology and traditional epistemology have shown interest in such a view In formal epistemology there has been particular interest in thinking of epistemology as a kind of decision theory where instead of maximizing expected utility one maximizes expected epistemic utility In traditional epistemology there has been particular interest in various forms of reliabilism about justification and whether such views are analogous to and so face similar problems to versions of consequentialism in ethics This volume presents some of the most recent work on these topics as well as others related to epistemic consequentialism by authors that are sympathetic to the view and those who are critical of it

Gorgias's Thought Erminia Di Iulio, 2022-08-07 Gorgias's Thought An Epistemological Reading is the first monograph published in English entirely devoted to Gorgias's epistemological thought and provides a new perspective on Gorgias's thought more broadly The book aims to undermine the common idea that Gorgias is either an orator uncommitted to any conception of truth or a thinker whose interest is confined to the philosophy of language It considers his major texts On What is Not or On Nature The Apology of Palamedes and The Encomium of Helen emphasising the originality and specificity of Gorgias's thought In combining a philological analysis with substantive use of contemporary epistemological approaches Di Iulio shows that Gorgias is to be considered first and foremost an epistemologist Gorgias's Thought An Epistemological Reading is of interest to students scholars and specialists in ancient thought epistemology history of philosophy and rhetoric

Aristotle on Meaning in the Living World Peter N. Jackson, 2025-11-28 This book provides an examination of Aristotle's relevance to modern philosophy and science It presents Aristotle's corpus as a complex and comprehensive picturing of a sublunary world in which meaning is exhibited by and shared between beings *ousiai* This approach is mirrored in modern philosophy by

phenomenology and in modern science by biosemiotics Peter N Jackson argues however that Aristotle overcomes the slippery subjectivism residually found even in these sympathetic modern approaches meaning is not just how living beings perceive the world but is an inherent property of the world itself and the beings it contains From this perspective our vision of the world is itself incomplete and superficial if it does not recognise the ontological structures that give definition to that world or the principle of complementarity through which we can engage with the complex reality of that world By contrast reductionism claims to achieve a complete picture of the world but does so only by conflating philosophy which needs to see the whole with science which needs to focus upon the part and which takes from philosophy only what it needs to do so The price of this claimed completion is profound it is the flattening of being and the annihilation of life itself and the milieu of meaning in which it exists This volume appeals to undergraduate and graduate students as well as researchers and helps us understand the world through science mathematics philosophy and religion without conflating or reducing these perspectives into one
