

BIOLOGY: CELLS & ORGANELLES

HEXAGONAL THINKING

Learning Goal:

Produce enhanced and critical thinking by making connections between the cells.

Instructions:

1. Cut out the hexagons.
2. Sort the terms on the hexagons.
3. Place in comparison between two of the hexagons, and explain that connection to your group members. To show that you have the comparison, place those hexagons with other thinking.
4. Continue building new comparison and building on those connections. (Building the comparison with your group. You will explain something and/or expanding the hexagons. Some hexagons may only have one connection, while others may have up to six connections.
5. When the group agrees with the arrangement, give or take the pieces to a group, and explain the connections for writing on the paper or directly on the paper.

Notes:

There is no set correct arrangement of the hexagons. Hexagons may be arranged in multiple ways.

Example Connections:

Example Discussion Questions:

- "This connects to... because..."
- "I agree with... because..."
- "Which evidence do you have for this claim?"
- "Please clarify the connection between..."
- "Tell me about the relationship between..."
- "I disagree with this term... because..."
- "We have reached an agreement that..."
- "In relation to your term, I noticed..."

Thinking about Biology Mimi Bres,Arnold Weisshaar,2018-01-05 For one semester non majors introductory biology laboratory courses Thinking About Biology An Introductory Lab Manual offers an extensively class tested approach to the introductory biology laboratory course The manual enables students to see how scientists work to solve problems through scientific investigation by asking questions and answering them through observations and conducting experiments This lab manual helps students gain practical experience to better understand lecture concepts acquire the basic knowledge needed to make informed decisions about biological questions in everyday life develop the problem solving skills that will lead to success in school and a competitive job market and learn to work effectively and productively as a member of a team The 6th Edition features new and revised activities based on feedback from students and faculty Thinking About Biology Mimi Bres,Arnold Weisshaar,2015-02-23 This is the eBook of the printed book and may not include any media website access codes or print supplements that may come packaged with the bound book For one semester non majors introductory biology laboratory courses with a human focus This manual offers a unique extensively class tested approach to introductory biology laboratory A full range of activities show how basic biological concepts can be applied to the world around us This lab manual helps students Gain practical experience that will help them understand lecture concepts Acquire the basic knowledge needed to make informed decisions about biological questions that arise in everyday life Develop the problem solving skills that will lead to success in school and in a competitive job market Learn to work effectively and productively as a member of a team The Fifth Edition features many new and revised activities based on feedback from hundreds of students and faculty reviewers *Thinking about Biology* Mimi Bres,Arnold Weisshaar,1997-12 This self guided introductory biology lab manual features a full range of activities that show how basic biological concepts can be applied to a wide variety of plants animals and microorganisms It is designed to help readers including those who are academically underprepared acquire the basic knowledge needed to make informed decisions about biological questions that arise in everyday life develop the problem solving skills that will lead to success in a competitive job market and learn to work effectively and productively as a member of a team Focuses on the scientific method requiring readers to develop hypotheses set up experiments collect data record their data in graphs and charts and draw conclusions from their experimental results Offers opportunities to transfer content knowledge to real life applications through questions interwoven into each activity Each laboratory includes a brief discussion of background information hints for solving problems important safety information Comprehension Checks and Self Tests with answers For anyone beginning a study of biology including those who are academically underprepared or from an ESL background *Tools for Critical Thinking in Biology* Stephen H. Jenkins,2015 The American Association for the Advancement of Science s report on Vision and Change in Undergraduate Biology Education suggests that instructors can no longer rely solely on trying to cover a syllabus packed with topics but rather should introduce fewer concepts but present

them in greater depth They further suggest that the principles embodied in a set of core concepts and competencies should be the basis for all undergraduate biology courses including those designed for nonmajors The theme of Tools for Critical Thinking in Biology will be the first and most fundamental of these competencies the ability to apply the process of science Biology courses and curricula must engage students in how scientific inquiry is conducted including evaluating and interpreting scientific explanations of the natural world The book uses diverse examples to illustrate how experiments work how hypotheses can be tested by systematic and comparative observations when experiments aren't possible how models are useful in science and how sound decisions can be based on the weight of evidence even when uncertainty remains These are fundamental issues in the process of science that are important for everyone to understand whether they pursue careers in science or not Where other introductory biology textbooks are organized scientific concepts Tools for Critical Thinking in Biology will instead show how methods can be used to test hypotheses in fields as different as ecology and medicine using contemporary case studies The book will provide students with a deeper understanding of the strengths and weaknesses of such methods for answering new questions and will thereby change the way they think about the fundamentals of biology

Biology and Politics. Recent Explorations Albert Somit, 2019-10-08 No detailed description available for Biology and Politics Recent Explorations **Thinking about Biology** Stephen Webster, 2003-04-03 Thinking about Biology is intended for biology students who are interested in reflecting on the wider contexts of their studies This 2003 book encourages students to see that biology does not deliver certainties it discusses how biological ideas become established facts it uses history to examine how ideas change and to show that the biological facts that form the basis of a biology course are likely to change too Each chapter is based on biological topics and examines them for their philosophical social and political implications Topics covered include the role of natural selection in evolution the history of ideas about fertilisation and inheritance vivisection and reductionism Genetically modified foods xenotransplantation eugenics and genetic testing are some of the controversial subjects discussed Thinking About Biology should be essential reading for all college students already taking a biology course and for those contemplating such a course in the future *Inquiry in Education, Volume II* Bruce M. Shore, Mark W. Aulls, Marcia A. B. Delcourt, 2017-09-25 A companion to Inquiry in Education Volume I The Conceptual Foundations for Research as a Curricular Imperative Volume I presents the arguments for the necessary inclusion of inquiry driven learning and instructional experiences in any modern school curriculum Volume II illustrates how educators in a range of settings have dealt with obstacles to successful implementation of inquiry based approaches Each chapter focuses on a particular barrier or barriers and has a primary focus on learners teachers or the curriculum The stories reflect highly varied learning contexts ranging from infancy to university from the classroom to a range of out of school contexts *Thinking in Education Research* Nick Peim, 2018-03-08 Thinking in Education Research examines the resources available from philosophy and theory that can be practically applied to any educational research project Nick Peim argues

that the current well established divide between theory and the empirical in research methods is unhelpful to students. Instead Thinking in Education Research looks at major lines of thinking in modern European philosophy from Kant to Freud and Derrida to Malabou and how they provide a rich resource for every stage of conducting research. By getting students engaged in how to think and how to do Peim illustrates that thinking is in fact a vital part of how you do research and is not an aside. Essential aspects of the research endeavour are re examined in the light of key philosophical positions to offer constructive potential including defining the object giving an account of the field the relation to truth the process of writing and constructing a case and the value attributed to formal knowledge. Thinking in Education Research does not try to resolve the unresolved issues of research thinking but rather encourages readers to productively engage with them so that we can enhance the possibilities of research practice and find opportunities for its expansion and refinement. Throughout the chapters clear and concise summaries of key philosophical positions and ideas are complemented with boxed accounts of how the philosophical debates discussed can be applied to real research projects. These features encourage the reader to consider how they can develop thinking and apply theory at every stage of their own research. This is essential reading for any educational research methods student or practicing researcher for important ways of thinking afresh about research methodology.

Biological Robustness Marta Bertolaso, Silvia Caianiello, Emanuele Serrelli, 2019-01-04 This volume reviews examples and notions of robustness at several levels of biological organization. It tackles many philosophical and conceptual issues and casts an outlook on the future challenges of robustness studies in the context of a practice oriented philosophy of science. The focus of discussion is on concrete case studies. These highlight the necessity of a level dependent description of robust biological behaviors. Experts from the neurosciences biochemistry ecology biology and the history and the philosophy of life sciences provide a multiplex perspective on the topic. Contributions span from protein folding to cell level robustness to organismal and developmental robustness to sensorimotor systems up to the robustness of ecological systems. Several chapters detail neurobiological case studies. The brain the poster child of plasticity in biology offers multiple examples of robustness. Neurobiology explores the importance of temporal organization and multiscalarity in making this robustness with plasticity possible. The discussion also includes structures well beyond the brain such as muscles and the complex feedback loops involved in the peculiar robustness of music perception. Overall the volume grounds general reflections upon concrete case studies opening to all the life sciences but also to non biological and bio inspired fields such as post modern engineering. It will appeal to researchers students as well as non expert readers.

Passionate Minds Lewis Wolpert, Alison Richards, 1997-09-25 The popular stereotype of the scientist as mad boffin or weedy nerd has been peddled widely in film and fiction with the implication that the world of science is far removed from the intellectual and emotional messiness of other human activities In *Passionate Minds* distinguished scientist Lewis Wolpert investigates the style and motivation of some of the most eminent scientists in the world In this stimulating collection of conversations scientists in fields as diverse as particle physics and evolutionary biology explore how their backgrounds have shaped their careers and discoveries how being an outsider or an innocent can play an invaluable role in overcoming conventional barriers to new understanding Being a little crazy does seem to help As Nobel laureate for physics Sheldon Glashow says If you would simply take all the kookiest ideas of the early 1970s and put them together you would have made for yourself the theory which is in fact the correct theory of nature so it was like madness These personal explorations with
