Actuarial Study, 1937 **An Introduction to the Mathematics of Money** David Lovelock, Marilou Mendel, Arthur L. Wright, 2007-04-05 Introduction Some people distinguish between savings and investments where savings are monies placed in relatively risk free accounts with modest rewards and where investments involve more risk and the potential for greater rewards In this book we do not distinguish between these ideas We treat them both under the umbrella of investing In general income falls into two categories earned income which is the income derived from your everyday job and unearned income which is income derived from investing You attend college to strengthen your prospects for earned income so why do you need to worry about unearned income namely investment income There are many reasons to invest and to learn about investing Perhaps the primary one is to take charge of your own financial future You need money for short term goals such as living expenses emergencies and for long term goals such as buying a car buying a house educating children paying catastrophic medical bills funding retirement Investing involves borrowing and lending and buying and selling borrowing and lending When you put money into a bank savings account you are lending your money and the bank is borrowing it You can lend money to a bank a business a government or a person In exchange for this the borrower promises to pay you interest and to return your initial investment at a future date Why would the borrower do this Because the borrower anticipates using this money in a way that earns more than the interest promised to you Examples of borrowing and lending are savings accounts certificates of deposits money market accounts and bonds **Financial**
