Postmodern Philosophy and the Scientific Turn Dorothea E. Olkowski,2012-04-23 A groundbreaking interdisciplinary approach to the study of consciousness Beautifully written engaging throughout and captivating Claire Colebrook The Pennsylvania State University What can come of a scientific engagement with postmodern philosophy Some scientists have claimed that the social sciences and humanities have nothing to contribute except perhaps peripherally to their research Dorothea E Olkowski shows that mathematics itself the historic link between science and philosophy plays a fundamental role in the development of the worldviews that drive both fields Focusing on

language its usage and expression of worldview she develops a phenomenological account of human thought and action to explicate the role of philosophy in the sciences Olkowski proposes a model of phenomenology both scientific and philosophical that helps make sense of reality and composes an ethics for dealing with unpredictability in our world

Lavenda, 2015-02-02 The book points out what has gone wrong with physics since Einstein's formulation of this theory of general relativity a century ago It points out inconsistencies and fallacies in the standard model of the big bang and the inflationary scenario which was supposed to have overcome those shortcomings the evolution of string theory from a theory of the strong interaction to a theory of gravitation and quantum mechanics which has not produced a single verifiable prediction and what it has accomplished is reaffirming wrong results like the entropy of a black hole which is not an entropy at all There have even been attempts to demote gravity to an emergent phenomenon with catastrophic effects We know exactly what happened at 10⁻³⁴ seconds after the big bang but do not know how fast gravity propagates whether gravitational waves exist and what are the limits of Newton's law Attempts to rectify this are the prediction of dark energy matter which has never been observed nor ever will and MOND The latter is really not a modification of Newtonian mechanics but a transformation of a dynamical law into a statistical one **Automotive Ergonomics** Heiner Bubb, Klaus

Bengler, Rainer E. Grünen, Mark Vollrath, 2021-10-19 Ergonomics teaches how to design technology in such a way that it is optimally adapted to the needs wishes and characteristics of the user In this context the concept of the human machine system has become established In a systematic way and with a detailed view of the complicated technical and perceptual psychological and methodological connections this book explains the basics of automotive ergonomics with numerous

examples The application is shown in examples such as package design of displays and control elements of environmental ergonomics such as lighting sound vibrations climate and smell The design of driver assistance systems from an ergonomic perspective is also a central topic The book is rounded off by methods of ergonomic vehicle development the use of mock ups driving simulators and tests in real vehicles and prototypes For the first time those responsible in the automotive industry and in the field of relevant research are provided with a specialized systematic work that provides the ergonomic findings in the design of today s automobiles This provides planners and designers of today s automobiles with concrete information for ergonomic product development enabling them to keep an eye on decisive requirements and subsequent customer acceptance This book is a translation of the original German 1st edition *Automobilergonomie* by Heiner Bubb Klaus Bengler Rainer E Gr nen Mark Vollrath published by Springer Fachmedien Wiesbaden GmbH part of Springer Nature in 2015 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors
