Lappan, 1998 NBS Special Publication, 1978 Mathematical Models in Natural Science and Engineering Juri I.

Neimark, 2012-12-06 This book has come into being as a result of the author's lectures on mathematical modelling rendered to the students BS and MS degree holders specializing in applied mathematics and computer science and to post graduate students in exact sciences of the Nizhny Novgorod State University after N Lobachevsky These lectures are adapted and presented as a single whole about mathematical models and modelling This new course of lectures appeared because the contemporary Russian educational system in applied mathematics rested upon a combination of fundamental and applied mathematics training this way of training oriented students upon solving only the exactly stated mathematical problems and thus there was created a certain estrangement to the most essential stages and sides of real solutions for applied problems such as thinking over and deeply piercing the essence of a specific problem and its mathematical statement This statement embraces simplifications adopted idealizations and creating a mathematical model its correction and matching the results obtained against a real system There also existed another main objective namely to orient university graduates in their future research not only upon purely mathematical issues but also upon comprehending and widely applying mathematics as a universal language of contemporary exact science and mathematical modelling as a powerful means for studying nature engineering and human society

Exploring Susceptible-Infectious-Recovered (SIR) Model for COVID-19 Investigation

Rahul Saxena, Mahipal Jadeja, Vikrant Bhateja, 2022-09-02 The book focuses on mathematical modelling of COVID 19 pandemic using the Susceptible Infectious and Recovered SIR model The predictive modelling of the disease with the exact facts and figures provides a ground to reason about growing trends and its future trajectory The book emphasizes on how the pandemic actually spreads out lockdown impact analysis and future course of actions based on mathematical calculations

Moreover since COVID 19 spread outburst has been twice the intensity studies and comparative analysis of the two waves of COVID 19 are another interesting feature of the book content The book is a knowledge base for various researchers and academicians to dive into the detailing of the COVID spread mathematical model and understand how it could be explored to draw outcomes To represent the factual information and analytical results effectively graphical and diagrammatic representations have been appended at appropriate places To keep the explanation simple and yet concrete mathematical concepts have also been introduced to carry out analysis to generate results for understanding the viral dynamics

Teachers Engaged in Research Cynthia W. Langrall,2006-03-01 Through the chapters in this volume we learn about the questions that capture the attention of teachers the methodologies they use to gather data and the ways in which they make sense of what they find Some of the research findings could be considered preliminary others confirmatory and some may be groundbreaking In all cases they provide fodder for further thinking and discussion about critical aspects of mathematics education

Landscapes of Investigation Miriam Godoy Penteado,Ole Skovsmose,2022-12-09 Creating landscapes of investigation is a primary concern of critical mathematics education It enables us to organise educational processes so that students and teachers are able to get involved in explorations guided by dialogical interactions It attempts to address explicit or implicit forms of social injustice by means of mathematics and also to promote a critical conception of mathematics challenging the assumption that the subject represents objectivity and neutrality Landscapes of Investigation provides many illustrations of how this can be done in primary secondary and university education It also illustrates how exploring landscapes of investigation can contribute to mathematics teacher education programmes This edited volume is the result of a collaboration established through the Colloquium in Research in Critical Mathematics Education which took place in 2016 2018 and 2019 in Brazil Its twenty eight contributors are young researchers from Brazil Chile Colombia India Mexico and the USA who are dedicated to the further development of critical mathematics education Organised in eighteen chapters the volume presents examples of engaging students from a diversity of social and economic backgrounds age ranges and abilities across different countries The chapters present original findings on the social aspects of all levels of mathematics education Landscapes of Investigation is of particular relevance to those with an interest in the potential of mathematics education to challenge social injustices

Wilmott, 1995-05-15 Mathematical Models in Finance compiles papers presented at the Royal Society of London discussion meeting Topics range from the foundations of classical theory to sophisticated up to date mathematical modeling and analysis In the wake of the increased level of mathematical awareness in the financial research community attention has focused on fundamental issues of market modelling that are not adequately allowed for in the standard analyses Examples include market anomalies and nonlinear coupling effects and demand new synthesis of mathematical and numerical techniques This line of inquiry is further stimulated by ever tightening profits due to increased competition Several papers in this volume offer pointers to future developments in this area

Scientific Protocols for Fire Investigation, Second Edition John J. Lentini, 2012-10-02 Knowledge of the science behind fires is critical to understanding a fire's cause and successfully presenting that determination to the authorities or in litigation Now in its second edition Scientific Protocols for Fire Investigation focuses on the practical application of scientific principles to determine the causes of fires Uniquely qualified with years of experience in on site investigations lab analyses and courtroom presentation the author provides a resource that is unparalleled in depth and focus The book explores The history of fire investigation and the basic chemistry and physics of fire The science of fire dynamics how things burn and how they interact with their surroundings while doing

so Practical procedures for conducting fire scene inspections Laboratory examination of fire debris to test for the presence of ignitable liquid residues and for potential ignition sources Relevant scientific principles as applied to 30 actual fires The evolution of the mythology of arson investigation The common root causes of errors in fire investigation The final chapter discusses the professional practice of fire investigation It examines quality assurance business practices and the fundamentals of being an expert witness with advice for giving testimony in depositions and at trial Other highlights of the second edition include new and expanded discussions on novel training methods first assumptions computer fire modeling low voltage ignition sources the questionable validity of some origin determinations and recent changes in NFPA 921 Thorough and accessible this volume not only provides the practical information necessary to conduct an effective inquiry but also offers insight into the science history and theory behind what makes fire investigation a multi faceted profession John Lentini discusses the book in a video on the CRC Press YouTube Channel
