

Chapter 1

Introduction

Section 1.1

- 1.1
- 1) Statistics refers to numerical facts such as the age of a student or the income of a family.
 - 2) Statistics refers to the field or discipline of study. Statistics is a group of methods used to collect, analyze, present, and interpret data and to make decisions.
- 1.2
- Descriptive statistics consists of methods that help us organize, display, and describe data using tables, graphs, and summary measures. Inferential statistics consists of methods that use sample results to help make decisions or predictions about a population.

Section 1.2

- 1.3
- A **population** is the collection of all elements whose characteristics are being studied. A **sample** is a portion of the population selected for study. A **representative sample** is a sample that represents the characteristics of the population as closely as possible, and a **random sample** is a sample drawn in such a way that each element of the population has a chance of being included in the sample. **Sampling with replacement** refers to a sampling procedure in which the item selected at each selection is put back in the population before the next item is drawn; **sampling without replacement** is a sampling procedure in which the item selected at each selection is not replaced in the population.

- 1.4
- Consider a standard deck of 52 cards. Suppose we randomly select one card from the deck and record the value and suit. If we put this card back in the deck before we randomly select a second card, this is an example of **sampling with replacement**. If we lay the first card aside and randomly select the second card from the 51 cards remaining in the deck, this is an example of **sampling without replacement**.

- 1.5
- A **census** is a survey that includes every member of the population. A survey based on a portion of the population is called a **sample survey**. A sample survey is preferred over a census for the following reasons:
- 1) Conducting a census is very expensive because the size of the population is often very large.
 - 2) Conducting a census is very time consuming.
 - 3) In many cases it is impossible to identify each element of the target population.
