Proceedings of the ... International Offshore Mechanics and Arctic Engineering Symposium, 1987 **Advances in Computer Science for Engineering and Education IV** Zhengbing Hu, Sergey Petoukhov, Ivan Dychka, Matthew He, 2021-07-21 This book comprises high quality refereed research papers presented at the Fourth International Conference on Computer Science Engineering and Education Applications ICCSEEA2021 held in Kyiv Ukraine on January 23 24 2021 organized jointly by the National Technical University of Ukraine Igor Sikorsky Kyiv Polytechnic Institute National Aviation University and the International Research Association of Modern Education and Computer Science The topics discussed in the book include state of the art papers in computer science artificial intelligence engineering techniques genetic coding systems deep learning with its medical applications and knowledge representation with its applications in education It is an excellent source of references for researchers graduate students engineers management practitioners and undergraduate students interested in computer science and their applications in engineering and education Advances in the Mechanics of Plates and Shells D. Durban, Dan Givoli, J.G. Simmonds, 2006-04-11 The optimal control of flexible structures is an active area of research The main body of work in this area is concerned with the control of time dependent displacements and stresses and assumes linear elastic conditions namely linear elastic material behavior and small deformation See e.g. 1 3 the collections of papers 4 5 and references therein On the other hand in the present paper we consider the static optimal

control of a structure made of a nonlinear elastic material and undergoing large deformation. An important application is the suppression of static or quasi static elastic deformation in flexible space structures such as parts of satellites by the use of control loads. Solar radiation and radiation from other sources induce a temperature field in the structure which in turn generates an elastic displacement field. The displacements must usually satisfy certain limitations dictated by the allowed working conditions of various orientation sensitive instruments and antennas in the space vehicle. For example a parabolic reflector may cease to be effective when undergoing large deflection. The elastic deformation can be reduced by use of control loads which may be implemented via mechanically based actuators or more modern piezoelectric devices. When the structure under consideration is made of a rubber like material and is undergoing large deformation nonlinear material and geometric effects must be taken into account in the analysis.
