

Solving Equations

Many algebra problems are actually based on being comfortable in using equal unknown quantities, or equations, as a statement that the quantities involved are the same as quantities that cannot change (the unknowns) while creating statements that represent the actual situation. For example, if a car travels 60 miles per hour for 3 hours, it will travel 180 miles. This is a statement that can be used to solve a problem.

While there are many properties of real numbers and properties of equations that are used in algebra, the properties that follow are the most important.

Basic Properties of Equations

Let a and b be real numbers.

The properties allow you to simplify equations by performing the same action on both sides.

$$a + b = c \quad \text{Add } d \text{ to both sides}$$

Subtraction like terms:

$$a + b = c \quad \text{Subtract } b \text{ from both sides}$$

Equations based on the distributive property allow you to simplify an equation by adding, subtracting, multiplying, or dividing both sides of the equation.

$$a(b + c) = d \quad \text{Divide both sides by } (b + c)$$

Properties of Equations

Let a and b be real numbers.

Addition property:

$$a + b = c \quad \text{Add } d \text{ to both sides}$$

Subtraction property:

$$a + b = c \quad \text{Subtract } b \text{ from both sides}$$

The properties allow you to simplify an equation by performing the same action on both sides of the equation.

Substitution property:

$$a + b = c \quad \text{Substitute } d \text{ for } a \text{ in the equation}$$

The properties allow you to simplify an equation by performing the same action on both sides of the equation. For example, if you have an equation $a + b = c$, you can subtract b from both sides to get $a = c - b$.

Multiplication property:

$$a + b = c \quad \text{Multiply both sides by } d$$

Division property:

$$a + b = c \quad \text{Divide both sides by } d$$

Math Education for America? Mark Wolfmeyer, 2013-12-04 Math Education for America analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States The effort to standardize a national mathematics curriculum for public schools in the U S culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics Rather than looking at the text of specific policy documents this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis Breaking new ground in detailing and theorizing the politics of math education Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments human capital education policy debates over traditional and reform pedagogy the assumed content knowledge deficit of math teachers and the proliferation of profit driven educational businesses By establishing the interconnectedness of these interests with the national math education curriculum he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest

Brumbaugh, 2004-09-22 THE book for elementary education mathematics content courses Designed to help prospective teachers of elementary school mathematics learn content beyond the rote level this text stimulates readers to think beyond just getting the problem right and fosters their development into thoughtful reflective self motivated life long learners It stresses the what and why of elementary school mathematics content Hints are provided about how to teach the content but this is mostly left to courses and texts that are dedicated to that purpose The text is organized around the National Council for Teachers of Mathematics Principles and Standards for School Mathematics The Standards dictate the basic sections of the text Within each section appropriate specific topics are developed intertwined with technology problem solving
