Bibliography Gerard De Vries,1976-12 Thjs bibliography had its inception in 1967 when the compilers first attempted a comprehensive cov erage of the finite element literature using both manual and computer based retrieval Initially the data base was stored on a card index but this was subsequently transferred to punched cards and magnetic tape Computer processing was adopted at an early stage to derive the three index formats from the data base Over the subsequent years several versions of the bibliography were produced with two of these being made available in a report form to other researchers From the widespread interest in these documents it became evident that there was a need for a commercially available comprehensive bibliography in this area A major effort was undertaken to revise update and extend the data base resulting in this present volume The bibliography covers the period 1956 1975 primarily although some earlier publications of histori cal interest are included The citations are not restricted to the English language and documents are listed in many languages and from diverse places of origin All publication formats were accepted so that references will be found to books monographs journal papers and articles theses dissertations reports surveys and the like **Solutions Manual** Yang

A Surface Performance-graded (SPG) Specification for Surface Treatment Binders Lubinda F. Walubita,2005 Presently surface treatment design and material selection is based on traditional specifications and experience which are not performance based and sometimes result in inadequate performance of the surface treatment In 2000 the first phase of a Texas Department of Transportation TxDOT research project developed a surface performance graded SPG specification for the selection of surface treatment binders Research Report 1710 1 The SPG specification is performance based and utilizes binder properties directly related to surface treatment performance and associated distress The specification takes into account environmental conditions aging effects of the binder visco elastic behavior and reliability The objective of this second phase of the project was to investigate and establish the validity and applicability of the proposed SPG specification make modifications where necessary and finally recommend the SPG specification for practical implementation The research methodology involved highway section identification laboratory testing including SPG grading performance monitoring and comparison of the SPG binder grades to actual field performance Factors included in the experimental design were binder type and suppliers environment aggregates and traffic Analyses of the results showed that there is generally a good correlation between the proposed SPG specification and actual field performance Overall the results are indicative that the SPG specification is functional and if properly applied the specification promises to be a relatively cost effective method for selecting binders to ensure adequate surface treatment performance However further validation is recommended possibly with controlled test sections to fully investigate the effects of design construction and quality control processes and address some of the deficiencies of the specification

Precast Concrete Raft Units J.W. Bull,2012-12-06 The use of precast concrete is a well established construction technique for beams floors panels piles walls and other structural elements The advantages of precasting include excellent quality control economical large scale production improved construction productivity especially in adverse weather conditions and immediate structure availability These advantages have been recognized for precast concrete raft pavement units since their introduction in the 1930s In the last ten years there has been a considerable increase in the use ofraft units especially in their range of applications their analysis and their design However the description of these developments has been published in academicjournals and conference proceedings which are not readily available to practising raft unit pavement design

engineers Pavement design engineers are under increasing pressure to produce raft unit designs that are inexpensive long lasting and able to allow reorganization to accommodate changing use and uncertainty of future loading requirements This is the first book devoted to raft unit pavements and will become a standard work of reference
