

- (a) If $h(t)$ is bandlimited show that $w(t) = Lv(t)$ is bandlimited regardless of whether $v(t)$ is bandlimited.
- (b) Suppose $v(t)$, $h(t)$, and $w(t) = Lv(t)$ are all bandlimited with spectrum contained in $-1/2 < s < 1/2$. According to the sampling theorem we can write

$$v(t) = \sum_{k=-\infty}^{\infty} v(k) \text{sinc}(t-k) \quad h(t) = \sum_{k=-\infty}^{\infty} h(k) \text{sinc}(t-k) \quad w(t) = \sum_{k=-\infty}^{\infty} w(k) \text{sinc}(t-k)$$

Express the sample values $w(k)$ in terms of the sample values of $v(t)$ and $h(t)$. (You will need to consider the convolution of shifted sines.)

5. (20 points) Let $a > 0$ and define the (continuous) running average of a signal $f(t)$ to be

$$Lf(t) = \frac{1}{2a} \int_{t-a}^{t+a} f(x) dx$$

- (a) Show that L is an LTI system and find its impulse response and transfer function.
- (b) What happens to the system as $a \rightarrow 0$? Justify your answer based on properties of the impulse response.
- (c) Find the impulse response and the transfer function for the cascaded system $M = L(Lf)$. Simplify your answer as much as possible, i.e., don't simply express the impulse response as a convolution.
- (d) Three signals are plotted (approximately) below. One is an input signal $f(t)$. One is $Lf(t)$ and one is $Mf(t)$. Which is which, and why?

6. (15 points) *Upsampling and Downsampling discrete signals:* We are given a discrete-time signal x_n , which was obtained by sampling a continuous-time $x(t)$ at frequency much higher than the Nyquist rate. Let $x_n = x(nT_s)$. Sometimes for an application, we need the samples of the signal $x(t)$ at a different sampling rate, say αT_s , where $\alpha > 0$. If $\alpha > 1$, it is downsampling else it is upsampling. One way to obtain the sample points at a different sampling frequency, is to reconstruct the signal $x(t)$ (which can be done as the original samples were obtained by sampling above the Nyquist rate) from the samples x_n and then resample it at the new frequency. However, due to non-idealities of the D/A and the A/D converters, this approach is not desirable. In this question, we want to obtain the new sample points directly by using x_n .

Differential Equations: Techniques, Theory, and Applications Barbara D. MacCluer, Paul S. Bourdon, Thomas L. Kriete, 2019-10-02 Differential Equations Techniques Theory and Applications is designed for a modern first course in differential equations either one or two semesters in length The organization of the book interweaves the three components in the subtitle with each building on and supporting the others Techniques include not just computational methods for producing solutions to differential equations but also qualitative methods for extracting conceptual information about differential equations and the systems modeled by them Theory is developed as a means of organizing understanding and codifying general principles Applications show the usefulness of the subject as a whole and heighten interest in both solution techniques and theory Formal proofs are included in cases where they enhance core understanding otherwise they are replaced by informal justifications containing key ideas of a proof in a more conversational format Applications are drawn from a wide variety of fields those in physical science and engineering are prominent of course but models from biology medicine ecology economics and sports are also featured The 1 400 exercises are especially compelling They range from routine calculations to large scale projects The more difficult problems both theoretical and applied are typically presented in manageable steps The hundreds of meticulously detailed modeling problems were deliberately designed along pedagogical principles found especially effective in the MAA study Characteristics of Successful Calculus Programs namely that asking students to work problems that require them to grapple with concepts or even proofs and do modeling activities is key to successful student experiences and retention in STEM programs The exposition itself is exceptionally readable rigorous yet conversational Students will find it inviting and approachable The text supports many different styles of pedagogy from traditional lecture to a flipped classroom model The availability of a computer algebra system is not assumed but there are many opportunities to incorporate the use of one *The Use of Fourier Series in the Solution of Beam-column Problems* Arthur Douglas Hughes, Benjamin Franklin Ruffner, Charles Edwin Thomas, Clair Van Norman Langton, Earl Clark Willey, Eugene Carl Starr, Fred Merryfield, Frederick Alton Everest, George Walter Gleeson, Glenn Voorhies, Harry Stanley Rogers, James Rinaldo Griffith, Louis Slegel, Raymond Hawley Johnson, Robert Edward Summers, Roland Eugene Dimick, Samuel Herman Graf, Thurman James Starker, William Howard Paul, Charles Arthur
