Advances in Neutron Capture Therapy R.F. Barth,D.E. Carpenter,A.H. Soloway,2012-12-06 Binary systems for the treatment of cancer potentially are among the most attractive of the new therapeutic modalities that currently are under investigation The basic concept is to selectively destroy malignant cells while concomitantly sparing normal tissue Neutron capture therapy NCT is the binary system that has been the subject of the Fifth International Symposium on Neutron Capture Therapy which was held September 13 17 1992 in Columbus Ohio under the auspices of the International Society for Neutron Capture Therapy Its objective was to bring together researchers from throughout the world and to provide a forum at which

they could present the latest advances in the development of Neutron capture therapy Neutron capture therapy has largely but not exclusively focused on the use of boron 10 as the target nuclide Boron neutron capture therapy BNCT is based on the nuclear reaction that occurs when the stable isotope boron 10 absorbs low energy non ionizing thermal neutrons to yield alphaparticles and recoiling lithium 7 nuclei The size and energy of these high linear energy transfer LET particles result in their being confined largely to the cells in which the capture reaction occurs For BNCT to be successful a sufficient number of I atoms must be localized within neoplastic cells and enough thermal neutrons must be delivered and absorbed by the I to produce a lethal 1 n QV Li reaction Two major problems must be surmounted

Immunology of Psoriatic Disease Eva Reali, Nicolò Costantino Brembilla, 2019-07-31 Psoriasis is a chronically relapsing inflammatory skin disorder affecting about 2% of the worldwide population The disease is associated with important systemic manifestations including cardiovascular comorbidities and metabolic syndrome In addition about 30% of patients develop joint inflammation known as psoriatic arthritis PsA Our knowledge on the pathogenesis of psoriasis has dramatically expanded in the last decade suggesting the existence or co existence of both auto immune and auto inflammatory components Skin lesions develop from a complex interplay between keratinocytes vascular endothelium dendritic cells and T cells generating a self sustaining inflammatory cycle Within this cycle epidermal CD8 T lymphocytes specific for self antigens may represent the major autoimmune mechanism Despite the recent progress in the comprehension of the pathogenesis of psoriasis many questions remain open ranging from the plaque initiating events to the characterization of the autoimmune autoinflammatory components of the disease The mechanisms that link cutaneous psoriasis to its extra cutaneous and systemic manifestations also remain vague In this Research Topic we invited top scientists to summarize the front line research in the field of immunology of cutaneous psoriasis and its systemic and joint manifestations Our intention was to integrate the pillar concepts of psoriasis immunopathology with the most novel insights aiming at providing an advanced view of this rapidly evolving and fascinating field

Oxygen Transport To Tissue XXIII David F. Wilson, Sydney M. Evans, John

Biaglow, Anna Pastuszko, 2012-12-06 The ISOTT 2001 local organizing committee was pleased to welcome over 140 delegates from around the world to the 29th annual general meeting of the International Society for Oxygen Transport to Tissue. The meeting was held in historic Philadelphia, USA, on the campus of the University of Pennsylvania from August 11 to 15, 2001. In the tradition of ISOTT, the conference was a total immersion experience. Attendees were encouraged to eat together and spend their evenings relaxing together in a style that maximized exchange of ideas and interactions of younger scientists with their more senior colleagues. Delegates participated in a total of 122 presentations, including poster displays, selected oral presentations, seminars by invited speakers, and a round table discussion. In choosing invited speakers and oral presenters, special emphasis was placed on methods for oxygen measurement in living tissue and application of these technologies to understanding physiological and biochemical basis for pathology related to tissue oxygenation. All of the manuscripts contained in this volume underwent both an editorial and scientific review, and only those meeting both criteria have been published. However, while all efforts have been made to eliminate editorial errors, some have undoubtedly been overlooked for which the editors apologize.

Polar Auxin Transport Rujin Chen, František Baluška, 2013-04-03 The importance of the plant growth regulator auxin for plant growth has long been recognized, even before the discovery of its chemical structures in the early 20th century. Physiological studies in the decades since have demonstrated that auxin is unidirectionally transported in plants, a process dubbed polar auxin transport. It is the polar auxin transport process that generates a local auxin concentration gradient and regulates a broad array of physiological and developmental processes. The discoveries of auxin transport carrier proteins that mediate auxin influx into and efflux out of transport competent cells and auxin receptor proteins for auxin signaling in the last few decades represent significant milestones in auxin research and open up opportunities to probe the cellular and molecular processes that regulate auxin transport and integrate environmental cues with signaling processes. Remarkably, components of the polar auxin transport machinery are present in both lower plants, such as mosses, and higher plants, including monocots and eudicots, illustrating the key role of polar auxin transport in plant evolution. This book highlights topics ranging from physiological and genetic studies of polar auxin transport in plant development to growth responses to the environment and plant-microbe interactions to hormonal cross-talks with various cellular and molecular regulatory processes essential for polar auxin transport.
