Evaluation of the Department of Veterans Affairs Mental Health Services National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee to Evaluate the Department of Veterans Affairs Mental Health Services, 2018-04-29 Approximately 4 million U S service members took part in the wars in Afghanistan and Iraq Shortly after troops started returning from their deployments some active duty service members and veterans began experiencing mental health problems Given the stressors associated with war it is not surprising that some service members developed such mental health conditions as posttraumatic stress disorder depression and substance use disorder Subsequent epidemiologic studies conducted on military and veteran populations that served in the operations in Afghanistan and Iraq provided scientific evidence that those who fought were in fact being diagnosed with mental illnesses and experiencing mental health related outcomes in particular suicide at a higher rate than the general population This report provides a comprehensive assessment of the quality capacity and access to mental health care services for veterans who served in the Armed Forces in Operation Enduring Freedom Operation Iraqi Freedom Operation New Dawn It includes an analysis of not only the quality and capacity of mental health care services within the Department of Veterans Affairs but also barriers faced by patients in utilizing those services Monthly Catalog of United States Government Publications

United States. Superintendent of Documents, 1991 Metadata-driven Software Systems in Biomedicine Prakash M. Nadkarni, 2011-05-27 While the use of database technology is ubiquitous throughout IT and health IT in particular it is not generally appreciated that as a database increases in scope certain designs are far superior to others In biomedical domains new knowledge is being generated continually and the databases that must support areas such as clinical care and research must also be able to evolve while requiring minimal or no logical physical redesign Appropriately designed metadata and software designed to utilize it effectively can provide significant insulation against change Many of the larger EMR or clinical research database vendors have realized this but their designs are proprietary and not described in the literature Consequently numerous misconceptions abound among individuals who have not had to work with large scale biomedical systems and graduates of a health or bioinformatics program may find that they need to unlearn what they were taught in database and software design classes in order to work productively with such systems A working knowledge of such systems is also important for individuals who are not primarily software developers such as health informaticians medical information officers and data analysts This book is in a sense intended to prepare all of the above individuals for the real world **The Oxford Handbook of Military Psychology** Janice H. Resources in Education, 1997 *Evaluation of the Lovell Federal Health Care Center Merger* Institute of Medicine, Board on the Health of Select Populations, Committee on Evaluation of the Lovell Federal Health Care Center Merger, 2013-01-28 The 2010 opening of the Captain James A Lovell Federal Health Care Center FHCC created a joint entity between the Department of Defense DoD and the Department of Veterans Affairs VA that replaced two separate centers in North Chicago VA and DoD leaders envisioned a state of the art facility that would deliver health care to both DoD and VA beneficiaries from northern Illinois to southern Wisconsin providing service members and veterans seamless access to an expanded array of medical services Unprecedented for the military and the VA the Lovell FHCC would integrate clinical and administrative services under a single line of authority The DoD asked the IOM to evaluate whether the Lovell FHCC has improved health care access quality and cost for the DoD and the VA compared with operating separate facilities and to examine whether patients and health care providers are satisfied with joint VA DoD

delivery of health care Evaluation of the Lovell Federal Health Care Center Merger Findings conclusions and Recommendations finds that initial implementation of the Lovell FHCC has provided important lessons about how to integrate VA and DoD health care services and has identified remaining obstacles that the departments could overcome to make such mergers more effective and less costly to implement The IOM recommends that the VA and the DoD develop a comprehensive evaluation plan to objectively judge its success or failure with measurable criteria that would provide essential knowledge for both the Lovell FHCC and future endeavors
