

CHAPTER 11

COST-VOLUME-PROFIT ANALYSIS: A MANAGERIAL PLANNING TOOL

QUESTIONS FOR WRITING AND DISCUSSION

1. CVP analysis allows managers to focus on selling prices, volume, costs, profits, and sales mix. Many different "what if" questions can be asked to assess the effect on profits of changes in key variables.
2. The units-sold approach defines sales volume in terms of units of product and gives answers in these same terms. The sales-revenue approach defines sales volume in terms of revenues and provides answers in these same terms.
3. Break-even point is the level of sales activity where total revenues equal total costs, or where zero profits are earned.
4. At the break-even point, all fixed costs are covered. Above the break-even point, only variable costs need to be covered. Thus, contribution margin per unit is profit per unit, provided that the unit selling price is greater than the unit variable cost (which it must be for break-even to be achieved).
5. Profit = $\$7.00 \times 5,000 = \$35,000$
6. Variable cost ratio = Variable costs/Sales. Contribution margin ratio = Contribution margin/Sales. Contribution margin ratio = $1 - \text{Variable cost ratio}$.
7. Break-even revenues = $\$20,000/0.40 = \$50,000$
8. No. The increase in contribution is \$9,000 ($0.30 \times \$30,000$), and the increase in advertising is \$10,000.
9. Sales mix is the relative proportion sold of each product. For example, a sales mix of 3:2 means that three units of one product are sold for every two of the second product.
10. Packages of products, based on the expected sales mix, are defined as a single product. Selling price and cost information for this package can then be used to carry out CVP analysis.
11. Package contribution margin: $(2 \times \$10) + (1 \times \$5) = \$25$. Break-even point = $\$30,000/\$25 = 1,200$ packages, or 2,400 units of A and 1,200 units of B.
12. Profit = $0.60(\$200,000 - \$100,000) = \$60,000$
13. A change in sales mix will change the contribution margin of the package (defined by the sales mix) and, thus, will change the units needed to break even.
14. Margin of safety is the sales activity in excess of that needed to break even. The higher the margin of safety, the lower the risk.
15. Operating leverage is the use of fixed costs to extract higher percentage changes in profits as sales activity changes. It is achieved by increasing fixed costs while lowering variable costs. Therefore, increased leverage implies increased risk, and vice versa.
16. Sensitivity analysis is a "what if" technique that examines the impact of changes in underlying assumptions on an answer. A company can input data on selling prices, variable costs, fixed costs, and sales mix and set up formulas to calculate break-even points and expected profits. Then, the data can be varied as desired to see what impact changes have on the expected profit.
17. By specifically including the costs that vary with nonunit drivers, the impact of changes in the nonunit drivers can be examined. In traditional CVP, all nonunit costs are lumped together as "fixed costs." While the costs are fixed with respect to units, they vary with respect to other drivers. ABC analysis reminds us of the importance of these nonunit drivers and costs.

Handbook of Research on Predictive Modeling and Optimization Methods in Science and Engineering Kim, Dookie,Sekhar Roy, Sanjiban,Länsivaara, Tim,Deo, Ravinesh,Samui, Pijush,2018-06-15 The disciplines of science and engineering rely heavily on the forecasting of prospective constraints for concepts that have not yet

been proven to exist especially in areas such as artificial intelligence Obtaining quality solutions to the problems presented becomes increasingly difficult due to the number of steps required to sift through the possible solutions and the ability to solve such problems relies on the recognition of patterns and the categorization of data into specific sets Predictive modeling and optimization methods allow unknown events to be categorized based on statistics and classifiers input by researchers The Handbook of Research on Predictive Modeling and Optimization Methods in Science and Engineering is a critical reference source that provides comprehensive information on the use of optimization techniques and predictive models to solve real life engineering and science problems Through discussions on techniques such as robust design optimization water level prediction and the prediction of human actions this publication identifies solutions to developing problems and new solutions for existing problems making this publication a valuable resource for engineers researchers graduate students and other professionals

Integrating Human Health into Urban and Transport Planning Mark Nieuwenhuijsen, Haneen Khreis, 2018-07-13 This volume brings together the world's leading experts on urban and transport planning environmental exposures physical activity health and health impact assessment to discuss challenges and solutions in cities The book provides a conceptual framework and work program for actions and outlines future research needs It presents the current evidence base the benefits of and numerous case studies on integrating health and the environment into urban development and transport planning Within cities there is a considerable variation in the levels of environmental exposures such as ambient air pollution noise and temperature green space availability and physical activity Many of these exposures and their adverse health impacts are related to and are being exacerbated by urban and transport planning and policy Emerging research suggests that urban and transport planning indicators such as road network distance to major roads traffic density household density industry and natural and green space can explain a large proportion of the variability in environmental exposures and therefore represent important and highly modifiable factors The urban environment is a complex interlinked system Decision makers need not only better data on the complexity of factors in environmental and developmental processes affecting human health but also an enhanced understanding of the linkages between these factors and health effects to determine at which level to target their actions most effectively In recent years there also has been a shift from trying to change at the national level to more comprehensive and ambitious actions being developed and implemented at the regional and local levels Cities have come to the forefront of providing solutions for environmental issues such as climate change which has co benefits for health but yet need better knowledge for wider health centric action This book provides the latest and most up to date information and studies for academics and practitioners alike
