modeling characterizing and solving partial differential equations PDEs The author provides all the theory and tools necessary to solve problems via exact approximate and numerical methods The Third Edition retains all the hallmarks of its previous editions including an emphasis on practical applications clear writing style and logical organization and extensive use of real world examples Among the new and revised material the book features A new section at the end of each original chapter exhibiting the use of specially constructed Maple procedures that solve PDEs via many of the methods presented in the chapters The results can be evaluated numerically or displayed graphically Two new chapters that present finite difference and finite element methods for the solution of PDEs Newly constructed Maple procedures are provided and used to carry out each of these methods All the numerical results can be displayed graphically A related FTP site that includes all the Maple code used in the text New exercises in each chapter and answers to many of the exercises are provided via the FTP site A supplementary Instructor s Solutions Manual is available The book begins with a demonstration of how the three basic types of equations parabolic hyperbolic and elliptic can be derived from random walk models It then covers an exceptionally broad range of topics including questions of stability analysis of singularities transform methods Green s functions and perturbation and asymptotic treatments Approximation methods for simplifying complicated problems and solutions are described and linear and nonlinear problems not easily solved by standard methods are examined in depth Examples from the fields of engineering and physical sciences are used liberally throughout the text to help illustrate how theory and techniques are applied to actual problems With its extensive use of examples and exercises this text is recommended for advanced undergraduates and graduate students in engineering science and applied mathematics as well as professionals in any of these fields It is possible to use the text as in the past without use of the new Maple material

Introductory Differential Equations Martha L. Abell, James P. Braselton, 2010-04-20 This text is for courses that are typically called Introductory Differential Equations Introductory Partial Differential Equations Applied Mathematics and Fourier Series Differential Equations is a text that follows a traditional approach and is appropriate for a first course in ordinary differential equations including Laplace transforms and a second course in Fourier series and boundary value problems Some schools might prefer to move the Laplace transform material to the second course which is why we have placed the chapter on Laplace transforms in its location in the text Ancillaries like Differential Equations with Mathematica and or Differential Equations with Maple would be recommended and or required ancillaries Because many students need a lot of pencil and paper practice to master the essential concepts the exercise sets are particularly comprehensive with a wide range of exercises ranging from straightforward to challenging Many different majors will require differential equations and applied mathematics so there should be a lot of interest in an intro level text like this The accessible writing style will be good for non math students as well as for undergrad classes
