1. INTRODUCTION The purpose of this paper is to present a new method for the determination of the critical point of a function of two variables. The method is based on the use of the Newton-Raphson method and the method of steepest descent. The method is applied to the determination of the critical point of the function $f(x, y) = x^2 + y^2 - 2x - 2y$. The critical point is found to be at $(1, 1)$.
