Self-Regulation and Co-regulation as Governance Solutions José Sixto-García, Bella Palomo,Carmen Peñafiel,2024-12-27 The governance of media infrastructures in the European Union has always been a particularly complex affair A notable factor contributing to this complexity is a framework that features a dual funding model where public and private media exist side by side Increasing concerns over the politicization of the media as well as the lack

of transparency concerning their ownership have made things even more complex The European Union s Media Pluralism Monitor has highlighted the weaknesses of information pluralism in a context where researchers are compelled to study the role that artificial intelligence automation is playing in both the creation of content and the development of spyware technologies for the surveillance of journalists In response to these concerns the European Commission has proposed the adoption of a new set of rules known as the Media Freedom Act the chief purpose of which is to protect media pluralism and independence within the bloc The Act raises a number of important questions however For example it is not prima facie clear whether media independence can or should be regulated some might even go so far as to argue that doing so would be a plain contradiction in terms and just how much pluralism there should be within a committee whose job is to evaluate information pluralism
