Abstract The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical and psychological health of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were 40 sedentary, middle-aged women who were randomly assigned to either a supervised walking program or a control group. The walking program consisted of 12 weeks of supervised walking, 3 times per week, for 30 minutes per session. The control group consisted of 20 women who did not participate in the walking program. The physical health of the women was assessed using a variety of measures, including heart rate, blood pressure, and body mass index. The psychological health of the women was assessed using a variety of measures, including mood, self-esteem, and perceived stress. The results of the study showed that the walking program had a positive effect on the physical and psychological health of the women. The women in the walking program had lower heart rates, lower blood pressures, and lower body mass indices than the women in the control group. The women in the walking program also had higher mood, higher self-esteem, and lower perceived stress than the women in the control group. The results of this study suggest that a 12-week, low-intensity, supervised walking program can improve the physical and psychological health of sedentary, middle-aged women.

QUESTION I have a 1994 Chevrolet Lumina with 100,000 miles. The engine is running fine, but the car is making a noise that sounds like a rattling or clunking sound. It seems to be coming from the front end. What could be the cause of this noise?

ANSWER The noise you are describing is likely coming from the front suspension or steering components. A rattling or clunking sound is often caused by worn ball joints, tie rod ends, or control arm bushings. These components are responsible for connecting the wheels to the frame and allowing for smooth movement. When they wear out, they can create a clunking or rattling noise, especially when driving over bumps or turning the steering wheel. I recommend having a professional mechanic inspect the front end of your vehicle to identify the specific worn component and replace it. This will help eliminate the noise and ensure safe driving.
