

3.1.2.4. Mono- slope

Mono-Slope or single-slope framing system is an alternative to gable type of frame that may be either Clear Span or multi-span. Mono-Slope configuration results in more expensive framing than the gable type.

Mono-Slope framing system is frequently adopted where:

- i) Rainwater needs to be drained away from the parking areas or from the adjacent buildings
- ii) Larger headroom is required at one sidewall
- iii) A new building is added directly adjacent to an existing building and it is required to avoid:
 - The creation of a valley condition along the connection of both buildings.
 - The imposition of additional loads on the columns and foundations of the existing building.

For larger widths "mono-slope-multi-span" framing will be more economical when column free area inside the building is not an essential requirement.

3.1.2.5. Space Saver

Space Saver framing system offers straight columns, keeping the rafter bottom flange horizontal for ceiling applications with rigid knee connection. Selection of Space Saver is appropriate when:

- i) The frame width is between 6m to 18m and eave height does not exceed 6m.
- ii) Straight columns are desired.
- iii) Roof slope of $\leq 0.5:10$ are acceptable.
- iv) Customer requires minimum air volume inside the building especially in cold storage ware houses.

American Institute of Steel Construction,2002 **Steel Detailers' Manual** Alan Hayward, Frank Weare, A. C. Oakhill, 2011-05-06 This highly illustrated manual provides practical guidance on structural steelwork detailing. It describes the common structural shapes in use and how they are joined to form members and complete structures. It explains detailing practice and conventions, provides detailing data for standard sections, bolts and welds, emphasises the importance of tolerances in order to achieve proper site fit up, discusses the important link between good detailing and construction costs. Examples of structures include single and multi storey buildings, towers and bridges. The detailing shown will be suitable in principle for fabrication and erection in many countries and the sizes shown will act as a guide to preliminary design. The third edition has been revised to take account of the new Eurocodes on structural steel work together with their National Annexes. The new edition also takes account of developments in 3 D modelling techniques and it includes more CAD standard library details.

Steel Designers' Manual Buick Davison, Graham W. Owens, 2008-04-15 This classic manual on structural steel design provides a major source of reference for structural engineers and fabricators working with the leading construction material. Based fully on the concepts of limit state design, the manual has been revised to take account of the 2000 revisions to BS 5950. It also looks at new developments in structural steel, environmental issues and outlines the main requirements of the Eurocode on structural steel.

Load and Resistance Factor Design, 1990 **Design of Steel Structures** Elias G. Abu-Saba, 2012-12-06 This book is intended for classroom teaching in architectural and civil engineering at the graduate and undergraduate levels. Although it has been developed from lecture notes given in structural steel design, it can be useful to practicing engineers. Many of the examples presented in this book are drawn from the field of design of structures. Design of Steel Structures can be used for one or two semesters of three hours each on the undergraduate level. For a two semester curriculum, Chapters 1 through 8 can be used during the first semester. Heavy emphasis should be placed on Chapters 1 through 5, giving the student a brief exposure to the consideration of wind and earthquakes in the design of buildings. With the new federal requirements vis a vis wind and earthquake hazards, it is beneficial to the student to have some understanding of the underlying concepts in this field. In addition to the class lectures, the instructor should require the student to submit a term project that includes the complete structural design of a multi story building using standard design procedures as specified by AISC Specifications. Thus the use of the AISC Steel Construction Manual is a must in teaching this course. In the second semester, Chapters 9 through 13 should be covered. At the undergraduate level, Chapters 11 through 13 should be used on a limited basis, leaving the student more time to concentrate on composite construction and built up girders.
