Academic Skills Quick Guide

Your assignment step-by-step

Planning your assignment

When you are studying at university you are expected to be an independent learner. Nobody is going to tell you when to study or when you should sit down and start working on your assignments. You are given information about what you have to do and when it is due. The rest is up to you.

The information in this guide is intended to help you at least have at your fingertips **what** you have to do and **when**. This information then helps you map out a **plan** for what you have to do over a whole session.

This guide also takes you step-by-step through the process of planning, writing and reviewing an assignment.

Thinking ahead and managing your time

Planning for the assignments you have to do in a session should start on the first day you have access to the Unit Information Guide for a unit, which has all the important information you need for your unit. Most students look immediately for information about what assignments they have to do. Don't just **look** at what assignments you have to do, use the Session Planner at the end of this guide so that you have a chart of what assignment is due when for each unit you are studying, which will help you organise your time. Remember that often you will have several big assignments due at around the same time so you need to plan carefully for when to start each one. You will get better at this once you have done a few assignments. Until you get used to doing assignments, be realistic. Don't think that you can research and write a 2000 word essay in one day and do a decent job. If you think it will take you a week to do a good job of researching and writing a 2000 word essay, double that time and you will be getting close.

Make sure you keep up with the weekly readings for the topics in each unit as this will save you time later because you will already have a good store of background knowledge. This will help you refine your research and organise your ideas.

Start working straight away! Don't put things off!

Writing your assignment

When you are ready to start working on an assignment follow these steps:

Step 1: Read, analyse and brainstorm the assignment task.

You need to read the assignment question very carefully. Then analyse the assignment task (see [Analysing assignment tasks Quick Guide](#)). Work out what the task requires and then brainstorm the topic for some **key** ideas to develop in your answer. These ideas will help you with the next step: your research on the topic.

Step 2: Research, read and take notes.

Start finding information, reading and thinking about the assignment. Start with the textbook, the assigned readings and the lecture/tutorial material, which might help you to answer the assignment task. Use sources that give you good background information (like your textbook) and then move to more specific sources (like journal articles) as you refine your research. (see [Taking Notes Quick Guide](#))

Improving Bayesian Reasoning: What Works and Why? Gorka Navarrete, David R. Mandel, 2016-02-02 We confess that the first part of our title is somewhat of a misnomer Bayesian reasoning is a normative approach to probabilistic belief revision and as such it is in need of no improvement Rather it is the typical individual whose reasoning and judgments often fall short of the Bayesian ideal who is the focus of improvement What have we learnt from over a half century of research and theory on this topic that could explain why people are often non Bayesian Can Bayesian reasoning be facilitated and if so why These are the questions that motivate this Frontiers in Psychology Research Topic Bayes theorem named after English statistician philosopher and Presbyterian minister Thomas Bayes offers a method for updating one's prior probability of an hypothesis H on the basis of new data D such that $P(H|D) = \frac{P(D|H)P(H)}{P(D)}$ The first wave of psychological research pioneered by Ward Edwards revealed that people were overly conservative in updating their posterior probabilities i.e. $P(D|H)A$ second wave spearheaded by Daniel Kahneman and Amos Tversky showed that people often ignored prior probabilities or base rates

where the priors had a frequentist interpretation and hence were not Bayesians at all In the 1990s a third wave of research spurred by Leda Cosmides and John Tooby and by Gerd Gigerenzer and Ulrich Hoffrage showed that people can reason more like a Bayesian if only the information provided takes the form of non relativized natural frequencies Although Kahneman and Tversky had already noted the advantages of frequency representations it was the third wave scholars who pushed the prescriptive agenda arguing that there are feasible and effective methods for improving belief revision Most scholars now agree that natural frequency representations do facilitate Bayesian reasoning However they do not agree on why this is so The original third wave scholars favor an evolutionary account that posits human brain adaptation to natural frequency processing But almost as soon as this view was proposed other scholars challenged it arguing that such evolutionary assumptions were not needed The dominant opposing view has been that the benefit of natural frequencies is mainly due to the fact that such representations make the nested set relations perfectly transparent Thus people can more easily see what information they need to focus on and how to simply combine it This Research Topic aims to take stock of where we are at present Are we in a proto fourth wave If so does it offer a synthesis of recent theoretical disagreements The second part of the title orients the reader to the two main subtopics what works and why In terms of the first subtopic we seek contributions that advance understanding of how to improve people s abilities to revise their beliefs and to integrate probabilistic information effectively The second subtopic centers on explaining why methods that improve non Bayesian reasoning work as well as they do In addressing that issue we welcome both critical analyses of existing theories as well as fresh perspectives For both subtopics we welcome the full range of manuscript types
