Plant Systematics Gurcharan Singh, 2004 The book strikes a balance between classical fundamental information and the recent developments in plant systematics Special attention has been devoted to the information on botanical nomenclature identification and phylogeny of angiosperms with numerous relevant examples and detailed explanation of the important nomenclatural problems An attempt has been made to present a continuity between orthodox and contemporary identification methods by working on a common example The methods of identification using computers have been further explored to help better online identification The chapter on cladistic methods has been totally revised and molecular systematics discussed in considerable detail Jacket

Digitally improving the identification of aquatic macroinvertebrates for indices used in biomonitoring Koen, R. C. J., Koen, F. J., Pattinson, N. B., Dickens, Chris W. S., Graham, P. M., 2023-12-31 This report provides an overview of the mini Stream Assessment Scoring System miniSASS and South African Scoring System Version 5 SASS5 as biomonitoring techniques for assessing the ecological condition of streams and rivers based on the identification of aquatic macroinvertebrates While miniSASS relies on minimally trained citizen scientists to identify macroinvertebrates at the Order level SASS5 utilizes expertly accredited practitioners for finer resolution even up to the family level However the reliance on citizen scientists for miniSASS identification introduces limitations in terms of precision accuracy and reliability To address these limitations ongoing developments within the CGIAR Initiative on Digital Innovation include the creation of a miniSASS smartphone application an upgraded website an interactive online course and a machine learning identification algorithm to assist with photo identification Additionally a revised dichotomous key has been developed to improve operator identification during miniSASS surveys Furthermore the potential for upscaling the machine learning identification algorithm to assist in identifying the 91 family level taxa used in SASS5 assessments has been explored The outcomes of these developments and explorations presented in this paper aim to enhance the overall effectiveness and reliability of both the miniSASS and SASS5 techniques By leveraging digital innovation and incorporating machine learning technology we anticipate the efficiency accuracy and accessibility of biomonitoring assessments will significantly improve ultimately contributing to a better understanding and management of our aquatic ecosystems
