 distinctive merit of this book lies in the way it combines the South African context with the wider international development
 context in ways that there is a flow of information and ideas both ways The book is an essential part of this sequence of ideas

combination of institutional capacity and institutional integrity contributes to serial instability in universities Rather durable solutions would include the depoliticisation of university councils and appointments of academics with integrity and capacity to manage and lead these fragile institutions This groundbreaking and long overdue study will offer a promising way forward for universities to better serve their communities and the country more broadly **Mintirho ya Vulavula** Jabulisile

Braun, 2014-10-16

In *Colonial Survey and Native Landscapes in Rural South Africa 1850-1913* Lindsay Frederick Braun explores the technical processes and struggles surrounding the creation and maintenance of boundaries and spaces in South Africa in the nineteenth and early twentieth centuries. The precision of surveyors and other colonial technicians lent these enterprises an illusion of irreproachable objectivity and authority even though the reality was far messier. Using a wide range of archival and printed materials from survey departments, repositories and libraries, the author presents two distinct episodes of struggle over lands and livelihoods: one from the Eastern Cape and one from the former northern Transvaal. These cases expose the contingencies, contests and negotiations that fundamentally shaped these changing South African landscapes.

Ecological Informatics Friedrich Recknagel, William K. Michener, 2017-09-21. This book introduces readers to ecological informatics as an emerging discipline that takes into account the data-intensive nature of ecology, the valuable information to be found in ecological data, and the need to communicate results and inform decisions, including those related to research, conservation and resource management. At its core, ecological informatics combines developments in information technology and ecological theory with applications that facilitate ecological research and the dissemination of results to scientists and the public. Its conceptual framework links ecological entities: genomes, organisms, populations, communities, ecosystems, landscapes, with data management, analysis and synthesis, and communicates new findings to inform decisions by following the course of a loop. In comparison to the 2nd edition published in 2006, the 3rd edition of *Ecological Informatics* has been completely restructured on the basis of the generic conceptual framework provided in Figure 1. It reflects the significant advances in data management, analysis and synthesis that have been made over the past 10 years, including new remote and in situ sensing techniques, the emergence of ecological and environmental observatories, novel evolutionary computations for knowledge discovery and forecasting, and new approaches to communicating results and informing decisions.
