Reconstructing the Future Bauhaus Earth,Hans Joachim Schellnhuber,Rocío Armillas Tiseyra,2023-06-19 Bauhaus Earth and Pontifical Academy of Sciences conference June 2022 The built environment is a critical factor in the climate equation Approximately 40 percent of global emissions derive from the construction operation and demolition of human settlements The 21st century must be the century of re entanglement where quintessential functions housing work culture recreation etc are reintegrated within urban spaces where socioeconomic and ecological systems form a mutually supportive network of networks and where past present and future are perceived as interwoven waves in the river of time Fortunately opportunities exist to transform the built

environment from a carbon source to a carbon sink through e.g. timber construction, high-rise buildings, circular bioeconomy, methods, AI-assisted design, smart recycling technology, multifunctional land use, integrated regional resource management, and community-based urban development to name just a few. This volume compiles the papers presented by world-renowned scientists, architects, spatial planners, activists, and policy makers at the Reconstructing the Future for People and Planet conference held at the Vatican in June 2022. First publication of the Bauhaus Earth think tank. Ideas to transform the anthropocene. Contributions by Hans Joachim Schellnhuber, Ursula von der Leyen, Edgar Pieterse, Francesca Bria, Xu Tiantian, Shigeru Ban, Sheela Patel, Ana Marín, and Calisto Tanzi and many others. We look forward to the re-entanglement of our cities with the ingenuity of nature's systems and to forging closer alliances across Built by Nature, Bauhaus Earth, and all our partners in this endeavor.
