Solutions in Geotechnics L. Rétháti, 2012-12-02 This is the first monograph to consider the possibility of utilizing probability theory in all essential fields of geotechnics. It deals in detail with in situ and laboratory tests, the evaluation of soil physical characteristics, the preparatory phase and the individual problems of design including load bearing capacity, prediction of settlements, dimensioning of slopes and retaining walls and quality control of earthworks. Numerous possibilities for and examples of the parallel utilization of deterministic and stochastic methods are given in the book, creating a connection between conventional and new modern methodologies. It demonstrates by examples that the only possibility of meeting technical and economic requirements simultaneously is by using the methods of probability theory. The book also gives an account of new geotechnical and mathematical results of the author, post evaluation of settlements and tilts, plotting of statistical bore profiles, elimination of the asymmetry of distribution by transformation etc. The book enables practitioners and to acquire new modern design methods and research to develop methods. Intermediate Statistics and Econometrics Dale J. Poirier, 1995 The standard introductory texts to mathematical statistics leave the Bayesian approach to be taught later in advanced topics courses giving students the impression that Bayesian statistics provide but a few techniques appropriate in only special circumstances Nothing could be further from the truth argues Dale Poirier who has developed a course for teaching comparatively both the classical and the Bayesian approaches to econometrics Poirier s text provides a thoroughly modern self contained comprehensive and accessible treatment of the probability and statistical foundations of econometrics with special emphasis on the linear regression model Written primarily for advanced undergraduate and graduate students who are pursuing research careers in economics Intermediate Statistics and Econometrics offers a broad perspective bringing together a great deal of diverse material Its comparative approach emphasis on regression and prediction and numerous exercises and references provide a solid foundation for subsequent courses in econometrics and will prove a valuable resource to many nonspecialists who want to update their quantitative skills The introduction closes with an example of a real world data set the Challengespace shuttle disaster that motivates

much of the text's theoretical discussion. The ten chapters that follow cover basic concepts, special distributions, distributions of functions of random variables, sampling theory, estimation, hypothesis testing, prediction, and the linear regression model. Appendixes contain a review of matrix algebra, computation, and statistical tables. *Uncertainty Analysis in Econometrics with Applications* Van-Nam Huynh, Vladik Kreinovich, Songsak Sriboonchitta, Komsan Suriya, 2012-12-14. Unlike uncertain dynamical systems in physical sciences where models for prediction are somewhat given to us by physical laws, uncertain dynamical systems in economics need statistical models. In this context, modeling and optimization surface as basic ingredients for fruitful applications. This volume concentrates on the current methodology of copulas and maximum entropy optimization. This volume contains main research presentations at the Sixth International Conference of the Thailand Econometrics Society held at the Faculty of Economics, Chiang Mai University, Thailand, during January 10-11, 2013. It consists of keynote addresses, theoretical and applied contributions. These contributions to Econometrics are somewhat centered around the theme of Copulas and Maximum Entropy Econometrics. The method of copulas is applied to a variety of economic problems where multivariate model building and correlation analysis are needed. As for the art of choosing copulas in practical problems, the principle of maximum entropy surfaces as a potential way to do so. The state of the art of Maximum Entropy Econometrics is presented in the first keynote address, while the second keynote address focusses on testing stationarity in economic time series data. *Advanced Econometric Theory* John Chipman, 2013-03-01. When learning econometrics, what better way than to be taught by one of its masters. In this significant new volume, John Chipman, the eminence grise of econometrics, presents his classic lectures in econometric theory. Starting with the linear regression model, least squares, Gauss-Markov theory, and the first principles of econometrics, this book guides the introductory student to an advanced stage of ability. The text covers multicollinearity and reduced rank estimation, the treatment of linear restrictions, and minimax estimation. Also included are chapters on the autocorrelation of residuals and simultaneous equation estimation. By the end of the text, students will have a solid grounding in econometrics. Despite the frequent complexity of the subject matter, Chipman's clear explanations, concise prose, and sharp analysis make this book stand out from others in the field. With mathematical rigor sharpened by a lifetime of econometric analysis, this significant volume is sure to become a seminal and indispensable text in this area. **Lives of the Laureates, sixth edition** Roger W. Spencer, David A. Macpherson, 2014-11-28. Autobiographical accounts by Nobel laureates reflect the richness and diversity of contemporary economic thought and offer insights into the creative process. *Lives of the Laureates* offers readers an informal history of modern economic thought as told through autobiographical essays by twenty-three Nobel Prize laureates in Economics. The essays not only provide unique insights into major economic ideas of our time but also shed light on the processes of intellectual discovery and creativity. The accounts are accessible and engaging, achieving clarity without sacrificing inherently difficult content. This sixth edition adds four recent Nobelists to its pages: Eric Maskin, who illustrates his explanation of

mechanism design with an example involving a mother a cake and two children Joseph Stiglitz who recounts his field s ideological wars linked to policy disputes Paul Krugman who describes the insights he gained from studying the model of the Capitol Hill Babysitting Coop and the recession it suffered when more people wanted to accumulate babysitting coupons than redeem them and Peter Diamond who maps his development from student to teacher to policy analyst Lives of the Laureates grows out of a continuing lecture series at Trinity University in San Antonio which invites Nobelists from American universities to describe their evolution as economists in personal as well as technical terms These lectures demonstrate the richness and diversity of contemporary economic thought The reader will find that paths cross in unexpected ways that disparate thinkers were often influenced by the same teachers and that luck as well as hard work plays a role in the process of scientific discovery The Laureates Lawrence R Klein Kenneth J Arrow Paul A Samuelson Milton Friedman George J Stigler James Tobin Franco Modigliani James M Buchanan Robert M Solow William F Sharpe Douglass C North Myron S Scholes Gary S Becker Robert E Lucas Jr James J Heckman Vernon L Smith Edward C Prescott Thomas C Schelling Edmund S Phelps Eric S Maskin Joseph E Stiglitz Paul Krugman Peter A Diamond
