make this decision The market is very efficient and there is a 50 percent chance that the next tick will be up and a 50 percent chance that it will be down 3 The most useful aspect of price action is what happens after the market moves beyond previous bars or trend lines on the chart For example if the market goes above a significant prior high and each subsequent bar forms a low that is above the prior bar's low and a high that is above the prior bar's high this price action indicates that the market will be higher on some subsequent bar even if it pulls back for a few bars in the near term 4 The market often breaks out of a small flag to reach a scalper's profit and then pulls back and the pattern then evolves into a larger flag This larger flag may also break out in the same direction but it might instead break out in the opposite direction
