Most students in abstract algebra classes have great difficulty making sense of what the instructor is saying Moreover this seems to remain true almost independently of the quality of the lecture This book is based on the constructivist belief that before students can make sense of any presentation of abstract mathematics they need to be engaged in mental activities which will establish an experiential base for any future verbal explanation No less they need to have the opportunity to reflect on their activities This approach is based on extensive theoretical and empirical studies as well as on the substantial experience of the authors in teaching astract algebra The main source of activities in this course is computer constructions specifically small programs written in the mathlike programming language ISETL the main tool for reflections is work in teams of 2 4 students where the activities are discussed and debated Because of the similarity of ISETL expressions to standard written mathematics there is very little programming overhead learning to program is inseparable from learning the mathematics Each topic is first introduced through computer activities which are then followed by a text section and exercises This text section is written in an informed discusive style closely relating definitions and proofs to the constructions in the activities Notions such as cosets and quotient groups become much more meaningful to the students than when they are preseted in a lecture **ACT Advanced Practice: Prep for 36** Kaplan Test Prep,2017-09-05 If you re looking to get a top score on the ACT Kaplan s ACT Advanced Practice workbook has the high difficulty practice and expert strategies you need to face the toughest questions with confidence Kaplan Test Prep is the Official Partner for Live Online Prep for the ACT For more information visit kaptest com onlinepreplive Essential Practice 9 practice sets with advanced high difficulty questions to help you score the most points More than 600 questions with detailed answers and explanations Kaplan s exclusive score raising strategies and methods to show you the best way to attack the most difficult ACT questions Comprehensive review of all sections on the test Expert Guidance Kaplan s expert teachers make sure our tests are true to the ACT 9 out of 10 Kaplan students get into one or more of their top choice colleges **Essential Primary Mathematics** Caroline Rickard,2013-05-16 If you are teaching or learning to teach primary mathematics this is the toolkit to support you Not only does it cover the essential knowledge and understanding that you and your pupils need to know it also offers 176 great ideas for teaching primary mathematics adaptable for use within different areas of mathematics and for different ages

Dynamics of Mathematical Models in Biology Alessandra Rogato, Valeria Zazzu, Mario Guarracino, 2016-11-03 This volume focuses on contributions from both the mathematics and life science community surrounding the concepts of time and dynamicity of nature two significant elements which are often overlooked in modeling process to avoid exponential computations The book is divided into three distinct parts dynamics of genomes and genetic variation dynamics of motifs and dynamics of biological networks Chapters included in dynamics of genomes and genetic variation analyze the molecular mechanisms and evolutionary processes that shape the structure and function of genomes and those that govern genome dynamics The dynamics of motifs portion of the volume provides an overview of current methods for motif searching in DNA RNA and proteins a key process to discover emergent properties of cells tissues and organisms The part devoted to the dynamics of biological networks covers networks aptly discusses networks in complex

biological functions and activities that interpret processes in cells Moreover chapters in this section examine several mathematical models and algorithms available for integration analysis and characterization Once life scientists began to produce experimental data at an unprecedented pace it became clear that mathematical models were necessary to interpret data to structure information with the aim to unveil biological mechanisms discover results and make predictions The second annual Bringing Maths to Life workshop held in Naples Italy October 2015 enabled a bi directional flow of ideas from and international group of mathematicians and biologists The venue allowed mathematicians to introduce novel algorithms methods and software that may be useful to model aspects of life science and life scientists posed new challenges for mathematicians
