Test Tubes & Trowels Kevin Andrews, Roger Doonan, 2003 Covering aspects of archaeological science such as artefact analysis ancient technology trade and exchange and dating materials this book critically explores the pace and application of scientific techniques in the discipline of archaeology Massive advances in archaeological understanding through the application of science have been made in areas that were once thought to be unrecoverable Nevertheless the application of increasingly sophisticated analytical techniques has often masked poor archaeological questions or perhaps stated something which can sometimes be blindingly obvious to simple non technical observation Conversely some aspects of our understanding of the past which were once thought obvious have been thrown into confusion by revelations born of the advances in archaeological science The use and abuse of science within archaeological understanding are presented through a series of case studies

Archaeology, History and Science Marcos Martinon-Torres, Thilo Rehren, 2016-09-16 Using a combination of historical archaeological and scientific data is not an uncommon research practice Rarely found however is a more overt critical consideration of how these sources of information relate to each other or explicit attempts at developing successful strategies for interdisciplinary work The authors in this volume provide such critical perspectives examining materials from a wide range of cultures and time periods to demonstrate the added value of combining in their research seemingly incompatible or even contradictory sources Case studies include explorations of the symbolism of flint knives in ancient Egypt the meaning of cuneiform glass texts medieval metallurgical traditions and urban archaeology at industrial sites This volume is noteworthy as it offers novel contributions to specific topics as well as fundamental reflections on the problems and potentials of the interdisciplinary study of the human past
