The Cosmos Jay M. Pasachoff, Alex Filippenko, 2019-07-11 Explains the fundamentals of astronomy together with the hottest current topics in this field, such as exoplanets and gravitational waves. ***The Moon*** Bill Leatherbarrow, 2018-05-15 The moon has always been the most obvious feature in our night sky. It is our nearest celestial neighbour, orbiting the Earth at an average distance of 384,400 kilometers and is large enough to display significant detail even to the unaided eye. Our moon has drawn observers since the dawn of humankind, and all people have tried to make sense of the puzzles it poses and the questions it raises. The moon provided our ancient ancestors with one of the earliest means of keeping and measuring time, and many early religions had cults that worshipped it. When it eclipses the sun, it provides one of the most awe-inspiring views in nature. In *The Moon*, celebrated amateur astronomer Bill Leatherbarrow provides expert insight into the history of our study of this compelling astronomical body. Drawing on his own decades of lunar observation, he describes how and why the observation and study of the moon has evolved, particularly in the age of telescopic study. He also offers an overview of current scientific thinking and developments in lunar science since the advent of the Space Age, even providing practical advice on how to make your own observations of the moon. Extensively illustrated with images of the lunar surface taken both from spacecraft and using amateur equipment, this book is an accessible introduction to complex astrophysical concepts that will give all amateur astronomers and anyone fascinated by this natural satellite something to moon over. *Chasing the Moon* Robert Stone, Alan Andres, 2019-06-04 JFK issued the historic moon landing challenge. These are the stories of the visionaries who helped America complete his vision with the first lunar landing fifty years ago. A Companion Book to the AMERICAN EXPERIENCE Film on PBS. Going in depth to explore their stories beyond the PBS series, writer/producer Robert Stone called one of our most important documentary filmmakers by Entertainment Weekly brings these important figures to brilliant life. In 1961, President John F. Kennedy proposed the nation spend twenty billion dollars to land a man on the Moon before the end of the decade. Based on eyewitness accounts and newly discovered archival material, *Chasing the Moon* reveals for the first time the

unknown stories of the fascinating individuals whose imaginative work across several decades culminated in America's momentous achievement. More than a story of engineers and astronauts, the moon landing, now celebrating its fiftieth anniversary, grew out of the dreams of science fiction writers, filmmakers, military geniuses, and rule-breaking scientists. They include Science fiction author Arthur C. Clarke, whose writing inspired some of the key players in the Moon race. A scientific paper he wrote in his twenties led to the U.S. beating Russia in one area of space communications: satellites. Wernher von Braun, the former Nazi military genius who oversaw Hitler's rocket weapons program. After working on ballistic missiles for the U.S. Army, he was recruited by NASA to manage the creation of the Saturn V moon rocket. Astronaut Frank Borman, commander of the first mission to circumnavigate the Moon, whose powerful testimony before Congress in 1967 decisively saved the U.S. lunar program from being cancelled. Poppy Northcutt, a young mathematician who was the first woman to work in Mission Control. Her media exposure as a unique presence in this all-male world allowed her the freedom to stand up for equal rights for women and minorities. Edward Dwight, an African American astronaut candidate recruited at the urging of the Kennedy White House to further the administration's civil rights agenda, but not everyone welcomed his inclusion. Setting these key players in the political, social, and cultural climate of the time, and including captivating photographs throughout, *Chasing the Moon* focuses on the science and the history, but most important, the extraordinary individuals behind what was undoubtedly the greatest human achievement of the twentieth century.

The Spacefaring Earth Michael G. Smith, 2024-12-04 This engaging survey of the Space Age links science and technology with politics and popular culture, war and peace, and crises and controversies. It examines the history of spaceflight as a mirror of human thought and action across the Earth. The volume encompasses the new astronomy and sciences of the modern era, the early dreamers and pioneers after 1903, the national competitions of the First World War, the rocket states that prepared for the Second World War, the rivalries and space race of the Cold War between the US and USSR, as well as more recent developments including the Space Shuttle, the International Space Station, national space programs, orbital technologies, transhumanism, and military and commercial ventures in space. It also stresses the importance of geography in the geopolitics of spaceflight, competition, and in the nature of the planetary biosphere. Taking a chronological approach to lived human experience and threshold achievements, the chapters show how these themes have been reflected in literature, art, music, film, and our new digital worlds. This book is essential reading for students of the history of the Space Age, as well as an excellent companion to courses on twentieth-century science and technology, the Cold War, and American history.

Space Architecture Education for Engineers and Architects Sandra Häuplik-Meusburger, Olga Bannova, 2016-03-30 This book considers two key educational tools for future generations of professionals with a space architecture background in the 21st century: 1) introducing the discipline of space architecture into the space system engineering curricula, and 2) developing space architecture as a distinct, complete training curriculum. Professionals educated this way will help shift focus from solely engineering-driven transportation systems and

sortie missions towards permanent off world human presence The architectural training teaches young professionals to operate at all scales from the overall picture down to the smallest details to provide directive intention not just analysis to design opportunities to address the relationship between human behavior and the built environment and to interact with many diverse fields and disciplines throughout the project lifecycle This book will benefit individuals and organizations responsible for planning transportation and habitat systems in space while also providing detailed information on work and design processes for architects and engineers

The Meaning of Growth Richard McNeill Douglas, 2025-09-30 Since the Limits to Growth report was published in 1972 it has been widely known that a commitment to endless growth was putting us on course for environmental disaster so why have we failed to take decisive political action in the half century since then In The Meaning of Growth Richard McNeill Douglas uses interpretive social science to uncover the cultural roots of political resistance to environmental science and policy Through a close reading of anti environmentalist rhetoric the book identifies its idolisation of growth as a defence of a modern Western European world view focusing on values of freedom power and immortality The significance of these findings is drawn out by applying the secularisation thesis a theoretical account of the development of a modern understanding of reality from a theological world view to which it is ostensibly opposed This framework is used to offer a deep interpretation of what is at

stake in environmental debate that to accept there are limits to growth means abandoning crucial elements of a faith in a theodicy of progress that makes life meaningful in a secular age Douglas concludes by suggesting that the precondition for political action on the environment is a change of philosophical perspective that provides for a sense of meaning in a world of limits This book should be of interest to academics in the fields of environmental sociology and communications studies as well as activists interested in understanding the motivations of anti environmentalist campaigners and how to counter their influence

Space, Place and Poetry in English and German, 1960-1975 Nicola Thomas, 2018-07-13 Space Place and Poetry in English and German 1960 1975 examines the work of Paul Celan J H Prynne Derek Mahon Sarah Kirsch Edwin Morgan and Ernst Jandl bringing together postwar English and German language poetry and criticism on the theme of space place and landscape Nicola Thomas highlights hitherto underexplored connections between a wide range of poets working across the two language areas demonstrating that space and place are vital critical categories for understanding poetry of this period Thomas s analysis reveals weaknesses in existing critical taxonomies arguing for the use of late modernist as a category with cross cultural relevance and promotes methodological exchange between the Anglophone and German traditions of landscape space and place oriented poetic criticism to the benefit of both
