The Nervous System

The nervous system is an extremely complex, highly organized, and very sensitive structure that regulates everything that happens throughout the human body. The main purpose of all the nervous system and its various parts is to carry and send information, and give the body the ability to respond to the environment. The nervous system is divided into two main parts: the central nervous system (CNS) and the peripheral nervous system (PNS).

Central Nervous System

The central nervous system, or CNS, is the part of the nervous system that is located in the brain and spinal cord. It is the most complex part of the nervous system. The brain is the control center of the body, and is located within the protective head skull. Layers of meningeal membranes and cerebrospinal fluid also protect the CNS. The spinal cord consists of a long, thin, tube-like structure that runs through the vertebral column. It has an S-shaped curve to the spinal cord, and a part of the spinal cord, called the caudal conus, extends into the body.

Peripheral Nervous System

There are all parts of the nervous system that are not the CNS, and they make up the peripheral nervous system (PNS). The PNS is made up of all sensory neurons that are capable of receiving stimuli, and neurons that are capable of responding to stimuli. For example, sensory neurons in the eye and ear are capable of receiving light and sound signals, and sending them to the brain for processing.

The PNS is divided into two main parts: the somatic nervous system, which controls voluntary movements, and the autonomic nervous system, which controls involuntary movements. The somatic nervous system is the part of the nervous system that controls voluntary movements, such as walking, talking, and writing. The autonomic nervous system is the part of the nervous system that controls involuntary movements, such as heart rate, blood pressure, and digestion. The autonomic nervous system is divided into two main parts: the sympathetic nervous system, which is responsible for the "fight or flight" response, and the parasympathetic nervous system, which is responsible for the "rest and digest" response.

The Brain

The brain is the most complex part of the nervous system. It is located in the head, and is the control center of the body. The brain is made up of billions of neurons, which are the basic units of the nervous system. The brain is divided into two main parts: the cerebrum, which is the largest part of the brain and is responsible for most of the body's functions, and the cerebellum, which is smaller and is responsible for coordination and balance. The brain is also divided into four lobes: the frontal lobe, which is responsible for decision-making and planning; the parietal lobe, which is responsible for processing sensory information; the temporal lobe, which is responsible for processing auditory information; and the occipital lobe, which is responsible for processing visual information.

wish wavefront imaging sensor with high resolution - Feb 11 2022

may 1 2019 we have demonstrated a high resolution noninterferometric wavefront sensor termed wish this computational imaging based method shifts the complexity from hardware

digital holography and wavefront sensing google books - Apr 27 2023

sep 19 2014 this highly practical and self contained guidebook explains the principles and major applications of digital hologram recording and numerical reconstruction digital

wavefront sensing reveals optical coherence nature - Jun 17 2022

feb 7 2014 wavefront sensing is a set of techniques providing efficient means to ascertain the shape of an optical wavefront or its deviation from an ideal reference owing to its wide

[digital holography springerlink](#) - Apr 15 2022

jan 1 2014 digital holography and wavefront sensing chapter digital holography ulf schnars claas falldorf john watson werner jüptner chapter first online 01 january

digital holography and wavefront sensing principles - Jan 25 2023

introduction fundamental principles of holography digital holography digital holographic interferometry dhi digital holographic particle sizing and microscopy special

characterization of the digital holographic wavefront sensor - Aug 20 2022

the holographic wavefront sensor treated in this paper is a modal detector that makes use of a multiplexed hologram previously coded with the desired aberration modes to be sensed the

open access digital holography and wavefront sensing - Dec 24 2022

this highly practical and self contained guidebook explains the principles and major applications of digital hologram recording and numerical reconstruction digital holography a special

digital holography and wavefront sensing principl meyer - Dec 12 2021

digital holography and wavefront sensing principl is straightforward in our digital library an online access to it is set as public consequently you can download it instantly our digital

compressive holographic sensing simplifies quantitative phase - May 17 2022

may 17 2023 compressive holographic sensing simplifies quantitative phase imaging light science applications news views open access published 17 may 2023 compressive

digital holography and wavefront sensing springer - Sep 01 2023

this book presents a self contained treatment of the principles and major applications of digital hologram recording and

numerical reconstruction digital holography this second edition
