Wolves for Yellowstone?: Research and analysis ,1990 **The Ellesmere Wolves** L. David Mech,Morgan Anderson,H. Dean Cluff,2025-03-12 In a fascinating story of discovery and science we meet a remote population of wolves unafraid of humans For parts of twenty four summers wolf biologist L David Mech lived with a group of wolves on Ellesmere Island some six hundred miles from the North Pole Elsewhere most wolves flee from even the scent of humans but these animals evolving relatively free from human persecution are unafraid Having already spent twenty eight years studying other populations of wolves more remotely by aircraft snow tracking live trapping and radio tracking Mech was primed to join their activities up close and record their interactions with each other This book tells the remarkable story of what Mech and the researchers who followed him have learned while living among the wolves The Ellesmere wolves were so unconcerned with Mech s presence that they allowed him to camp near their den and to sit on his all terrain vehicle as he observed them watching packs as large as seven adults and six pups go about their normal activities In these extraordinarily close quarters a pup untying his bootlace or an adult sniffing his gloved hand was just part of daily life Mech accompanied the wolves on their travels and watched as they hunted muskoxen and arctic hares By achieving the same kind of intimacy with his wild hosts every action that we might experience living with domesticated dogs Mech gained new insights into common but rarely studied behaviors like pup feeding food caching howling and scent marking After Mech s time at Ellesmere ended his

coauthors and fellow wolf researchers Morgan Anderson and H Dean Cluff spent parts of four summers studying the wolves via radio collars further illuminating the creatures movements and ecology This book synthesizes their findings offering both a compelling scientific overview of the animals behavior from hunting to living in packs to rearing pups and a tale of adventure and survival in the Arctic **Wolf Population Dynamics in Northcentral Minnesota** T. K. Fuller,1988 A Hybrid Approach for Power Plant Fault Diagnostics Tamiru Alemu Lemma,2017-12-30 This book provides a hybrid approach to fault detection and diagnostics It presents a detailed analysis related to practical applications of the fault detection and diagnostics framework and highlights recent findings on power plant nonlinear model identification and fault diagnostics The effectiveness of the methods presented is tested using data acquired from actual cogeneration and cooling plants CCPs The models presented were developed by applying Neuro Fuzzy NF methods The book offers a valuable resource for researchers and practicing engineers alike **Wolves and Dogs** Friederike Range,Sarah Marshall-Pescini,2022-08-09 Various parallels have been drawn between wolves and humans from the perspective of their social organisation Therefore studying wolves may well shed light on the evolutionary origins of complex human cognition and in particular on the role that cooperation played in its development Humans closely share their lives with millions of dogs the domesticated form of wolves Biologically wolves and dogs can be considered to be the same species yet only dogs are suitable living companions in human homes highlighting the importance of cognitive and emotional differences between the two forms The behaviour of wolves and dogs largely depends on the environment the animals grew up and live in This book reviews more than 50 years of research on the differences and similarities of wolves and dogs Beyond the socio ecology the work explores different theories about when and how the domestication of wolves might have started and which behaviours and cognitive abilities might have changed during this process Readers will discover how these fascinating animals live with their conspecifics in their social groups how they approach and solve problems in their daily lives and how they see and interact with their human partners *Yellowstone Wolves* Douglas W. Yuskavitch, 2015-01-06 In Wolf Country tells the story of the first groups of wolves that emigrated from reintroduced areas in Idaho to re colonize their former habitat in the Pacific Northwest how government officials prepared for their arrival and the battles between the people who welcome them and the people who don't set against the backdrop of the ongoing political controversy surrounding wolf populations in the Northern Rockies The political maneuvering and intense controversy that has defined wolves recovery in the West makes this a compelling and timely read **Behavior Problems of the Dog and**

Trends and Management of Wolf-livestock Conflicts in Minnesota Steven H. Fritts, 1992 The nature and extent of wolf livestock conflicts in Minnesota during 1975-86 was studied as part of a wolf depredation control program The level of wolf *Canis lupus* depredation on livestock in Minnesota as determined from the total number of complaints verified annually during 1975-86 showed a slight upward trend but did not increase significantly A significant portion of the annual variation in verified complaints perhaps the best index on severity of the depredation problem was explained by variation in severity of the winter before the depredation season inverse relation The addition of a time variable did not account for a significant portion of the remaining variation Verified complaints of depredations averaged 30 per year affecting an average of 21 farms 0.33% of producers annually Conflicts were highly seasonal and involved primarily cattle mainly calves sheep and domestic turkeys Annual variation in losses of sheep and turkeys was higher than for cattle In recent years sheep and turkey losses in two northwestern counties have increased preventive control may be warranted in those areas Site specific trapping and removal of wolves in response to depredations was the primary control method resulting in captures of 437 wolves in 12 depredation seasons For the wolf range as a whole no relation was found between wolf removal and subsequent depredation rates however wolf removal seemed to reduce depredations locally at some farms When adults and yearlings were removed no subsequent losses occurred in about 55% of instances removal of young of the year reduced losses in 22% Removal of breeding wolves did not reduce the incidence of subsequent losses more than removal of nonbreeding adults and yearlings did The low number of conflicts for 1975-86 was remarkable considering the frequent contact between wolves and livestock However an update of complaints for 1987-89 revealed a definite upward trend in depredations Epilogue Improvements in farm management practices may reduce the present number of conflicts
