Gallium Oxide Masataka Higashiwaki, Shizuo Fujita, 2020-04-23 This book provides comprehensive coverage of the new wide bandgap semiconductor gallium oxide Ga₂O₃. Ga₂O₃ has been attracting much attention due to its excellent materials properties. It features an extremely large bandgap of greater than 4.5 eV and availability of large size high quality native substrates produced from melt grown bulk single crystals. Ga₂O₃ is thus a rising star among ultra wide bandgap semiconductors and represents a key emerging research field for the worldwide semiconductor community. Expert chapters cover physical properties, synthesis and state of the art applications including materials properties, growth techniques of melt grown bulk single crystals and epitaxial thin films and many types of devices. The book is an essential resource for academic and industry readers who have an interest in or plan to start a new R & D project related to Ga₂O₃. *Optoelectronics* Sergei Pyshkin, John Ballato, 2017-07-12 *Optoelectronics Advanced Device Structures Book IV* is following the *Optoelectronics Books I, II and III* published in 2011, 2013 and 2015 as part of the InTech collection of international works on optoelectronics. Accordingly, as with the first three books of the collection, this book covers recent achievements by specialists around the world. The growing number of countries participating in this endeavor, as well as joint participation of the US and Moldova scientists in edition of this book, testifies to the unifying effect of science. An interested reader will find in the book the description of properties and applications employing organic and inorganic materials, as well as the methods of fabrication and analysis of operation and regions of application of modern optoelectronic devices. **Science and Technology of Thin Film Superconductors** R.D. McConnell, Stuart A. Wolf, 2012-12-06 The Conference on the Science and Technology of Thin Film Superconductors was conceived in the early part of 1988 as a forum for the specialist in thin film superconductivity. The conference was held on November 14-18, 1988 in Colorado Springs, Colorado. Although many excellent superconductivity conferences had been convened in the wake of the 1986-1987 discoveries in high temperature superconductivity, thin film topics were often dispersed among the sessions of a more general conference agenda. The response to the Conference on the Science and Technology of Thin Film Superconductors confirmed the need for an extended conference devoted to thin film superconductors. These proceedings are a major contribution to the technology of thin film superconductivity because of the breadth and quality of the articles provided by leaders in the field. The proceedings are divided into articles on laser deposition, sputtering, evaporation, metal organic chemical vapor deposition, thick film, substrate studies, characterization, patterning and applications, and general properties. Most of the articles discuss scientific issues for high temperature thin film superconductors, although the conference was to be a forum for technology and scientific questions for both low and high temperature superconductivity. For the first day of the 5 day conference, Lawrence Berkeley Laboratory had organized an excellent set of short courses in superconducting thin film devices. *Mitochondria: The Anti-cancer Target for the Third Millennium* Jiri Neuzil, Shazib Pervaiz, Simone Fulda, 2014-05-26 This book will be focused on mitochondria as a very promising

targets for anti cancer drugs yet to be fully exploited It will contain chapters focused on aspects of basic research as well as on clinical relevance which will be written by specialists in the field That the role of mitochondria in human pathologies goes beyond the neoplastic diseases will be documented by a chapter of the role of mitochondria in Friedreich s ataxia
