#### For 1 drop = 2 or 5 ppm Mo

1. Rinse and fill 25 mL sample tube (#9198) to mark with water to be tested.

NOTE: For 1 drop = 2 ppm, fill to 25 mL mark.  
For 1 drop = 5 ppm, fill to 10 mL mark.

2. Rinse and fill second 25 mL sample tube to same mark with distilled, deionized, or molybdenum-free tap water.

3. For 25 mL sample, using separate 1.0 mL pipets (#4030), add 1.0 mL R-0890 Molybdenum Buffer Solution and 1.0 mL R-0891 Molybdenum Indicator Solution to each 25 mL sample tube. For 10 mL sample, add 0.5 mL of each reagent to each sample tube. Swirl to mix.

4. Add R-0892 Molybdenum Titrating Solution, dropwise, swirling and counting after each drop, to 25 mL sample tube containing molybdenum, until color matches 25 mL sample tube containing no molybdenum, or until no further change in color occurs. Always hold bottle in vertical position.

5. For 25 mL sample, multiply drops of R-0892 Molybdenum Titrating Solution by 2. Record as parts per million (ppm) molybdenum. For 10 mL sample, multiply drops of R-0892 Molybdenum Titrating Solution by 5. Record as ppm molybdenum.

Instr. #5375

NOTE: To convert molybdenum (Mo) readings to molybdate ( $\text{MoO}_4^{2-}$ ), multiply Mo readings by 1.7; to convert to sodium molybdate dihydrate ( $\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$ ), multiply by 2.52.

#### For 1 drop = 20 or 50 ppm Mo

1. Rinse and fill one 25 mL sample tube (#9198) to 25 mL mark with distilled, deionized, or molybdenum-free tap water.

2. Using a 3 mL pipet (#4078), place water to be tested in second 25 mL sample tube.

NOTE: For 1 drop = 20 ppm, fill pipet to 2.5 mL mark.  
For 1 drop = 50 ppm, fill pipet to 1.0 mL mark.

3. Dilute to 25 mL mark with distilled, deionized, or molybdenum-free tap water.
4. Using separate 1.0 mL pipets (#4030), add 1.0 mL R-0890 Molybdenum Buffer Solution and 1.0 mL R-0891 Molybdenum Indicator Solution to each 25 mL sample tube. Swirl to mix.
5. Add R-0892 Molybdenum Titrating Solution dropwise, swirling and counting after each drop, to 25 mL sample tube containing molybdenum, until color matches 25 mL sample tube containing no molybdenum or until no further change in color occurs. Always hold bottle in vertical position.
6. For 2.5 mL sample, multiply drops of R-0892 Molybdenum Titrating Solution by 20. Record as parts per million (ppm) molybdenum. For 1.0 mL sample, multiply drops of R-0892 Molybdenum Titrating Solution by 50. Record as ppm molybdenum.

NOTE: To convert molybdenum (Mo) readings to molybdate ( $\text{MoO}_4^{2-}$ ), multiply Mo readings by 1.7; to convert to sodium molybdate dihydrate ( $\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$ ), multiply by 2.52.

NOTE: R-0891 Molybdenum Indicator Solution has a limited shelf-life. Occasionally check indicator performance by following procedure for 1 drop = 2 ppm using R-0887 Molybdenum Standard 20 ppm as the sample. Titration should require 10 drops to endpoint. (An alternate kit, K-1808P, is available, which replaces R-0891 with a stable, two-part reagent system.)

**Handbook of Understanding and Measuring Intelligence** Oliver Wilhelm, Randall W.

Engle, 2005) it is extremely useful and contemporary covering among its five hundred pages genetics, neuro imaging and emotional intelligence. It also provides a good indicator of current psychological work in the area with empirical evidence and theory sitting alongside each other. The material on meta cognition would I suspect be of most interest to philosophers along with the more basic questions concerning the nature of memory and intelligence.

**PRACTICAL PHILOSOPHY** This volume provides an in depth yet accessible and up to date review of the key topics pertinent to current intelligence research. This state of the art summary about our theoretical understanding of human abilities and their measurement is of interest for researchers, practitioners and advanced students in psychology, education and related disciplines. It's a great summary and a good read on a truly important topic.

Dr Heinz Holling, University of Muenster, Wilhelm and Engle have compiled a highly informative set of chapters on various topics related to intelligence. The chapters describing recent European work will be especially informative for North American readers. The work is strengthened by provision of review chapters that keep the reader in sight of the forest rather than the trees.

Earl Hunt, University of Washington: Without an informed cognitive understanding of intelligence as a construct, the technology of intelligence testing will make little to no progress. Psychologists with a more psychometric background need detailed knowledge about the cognitive processes underlying intelligent behavior. Likewise, psychologists with a more cognitive or experimental background need to make more use of applied knowledge from psychometric research.

**The Handbook of Understanding and Measuring Intelligence** provides an overview of recent studies on intelligence to help readers develop a sound understanding of results and perspectives in intelligence research. In this volume, editors Oliver Wilhelm and Randall W. Engle bring together a group of respected experts from two fields of intelligence research: cognition and methods, to summarize, review and evaluate research in their areas of expertise. The chapters in this book present state of the art examinations of a particular domain of intelligence research and highlight important methodological considerations, theoretical claims and pervasive problems in the field. The Handbook provides those with a broad interest in individual differences, cognitive abilities, intelligence, educational measurement, thinking, reasoning or problem solving with a comprehensive description of the status quo and prospects of intelligence research. The book is divided into two parts that are intended to build upon and relate to one another: Part I, the cognitive section, explores several theoretical viewpoints on intelligence; and Part II, the methodological section, addresses fundamental statistical problems and pragmatic assessment problems in measuring intelligence.

**Key Features:** The volume editors provide a general introduction and conclude the book with an integrative epilogue. Contributors to this volume are experts in intelligence with a background in methodology or

theory who offer current theoretical perspectives and recent empirical results which are of interest to a broad audience In addition to contributions from U S intelligence experts authors from Europe and Australia provide an international perspective and articulate viewpoints and results not otherwise readily available to an American audience Developments in theory are described with respect to their implications at the measurement level and developments on the methodological level are evaluated with respect to their contribution to the theoretical understanding of intelligence The Handbook is designed for scholars and psychology professionals interested in intelligence cognitive abilities educational testing and measurement reasoning and problem solving It can also be used by advanced undergraduate and graduate students studying intelligence or the psychology of individual differences In addition the Handbook will be a welcome addition to any academic library
