In response to James Gleick's "The Information: A History, a Theory, a Flood" Clinton Rogers, 2022-02-23 Academic Paper from the year 2022 in the subject American Studies Literature grade 100 Fort Hays State University FHSU language English abstract In James Gleick s whirlwind tour of information theory *The Information A History a Theory a Flood* 2011 he states that We have made many towers of Babel This sentence seems to present us with a double meaning Having occurred after a list of the disambiguation links for the term Babel in Wikipedia the We have made many towers of Babel is a statement denoting the number of objects listed with the name Babel On another level the sentence could be a descriptive statement about the entirety of his book and the long history of information and technology in general This short and poignant biblical story no longer than ten or so lines describes a uniting of all the disparate people groups of the world into a single language that renders communication effortless and using the newest form of architectural technology bricks they attempt to build a tower to the heavens This could be interpreted as an attempt to build towards the highest ideal for mankind or an attempt at meaning making God rewarded their hubris with a confounding of their language But it didn t have to be God who obstructed their great project because language itself has proven to be of such an unruly character We are still building our technological towers of Babel and humanity remains confounded in the process Gleick states Wikipedia evolves dendritically sending off new shoots in many directions In this it resembles the universe Gleick 2011 Discreetly hidden among a description of the transmogrification of the Wikipedia site which had proved to be an unprecedented source of information for its transmission and utility this phrase on a number of levels seems to encapsulate the evolution of our relationship to information and the

many twists and turns angles and blind spots that this story takes The analogy of the dendrite is also an apt description of two of the most complex and mysterious systems of information known to man the telescopic images of the cosmic networks of galaxies and the microscopic weblike network of neurons in the human brain The universe of entangled facts to be searched and processed for meaning is the way we view the objective world With every bit of information integrated we form new understandings and our knowledge branches out into ever new directions

Capitalism, Citizenship and the Arts of Thinking Kathryn Dean, 2014-03-26 Capitalism Citizenship and the Arts of Thinking proposes a historical materialist ethic of human flourishing understood in terms of the practice of citizenship It focuses on the ways in which capitalism s necessary mode of thinking analytical thinking impedes the nurturing of capabilities for citizenship as understood from a Marxian Aristotelian point of view It includes a systematic discussion of the Aristotelian resonances in Marx s critique of capitalism as well as an elaboration and critique of Alfred Sohn Rethel s account of the origins of analytical thinking in his book Intellectual and Manual Labor A Critique of Epistemology Dean s critique of this book draws on the language theories of Lev Vygotsky Alexander Luria Jack Goody Eric Havelock and Walter Ong so as to identify the origins of analytical thinking in literacy rather than in monetised exchange relations as claimed by Sohn Rethel Having traced the development of analytical thinking so as to bring out the ways in which this thinking was a condition of possibility for the division of head and hand in nineteenth century England Dean brings the analysis into the contemporary world by examining the changes effected by digitalised communication in terms citizenship capabilities now drawing on the work of Michael Hardt and Antonio Negri in order to do so The book s ground breaking content is in the fusion of Marxian Aristotelian and linguistic elements to develop a critique of capitalism s hegemonic mode of thinking analytical thinking as manifested in the modern sciences and to show how the draining of intelligibility from the everyday world permitted by this thinking becomes an obstacle to the practice of meaningful citizenship Its main appeal will

be to Marxist thinkers whose main concern is with the alienating as opposed to exploitative character of capitalist modes of life. It is written to complement the work of such Marxists, these being in the main writers such as Michael Hardt and Antonio Negri, and is pitched at researchers in the field. It could be used on post graduate courses in political theory as well as social and cultural theory.
