A General Guide to Tank Cars Union Pacific Railroad Company. Hazardous Materials Training,1990 *Hanford Tank Clean Up* ,1995 One of the most difficult technical challenges in cleaning up the US Department of Energy s DOE Hanford Site in southeast Washington State will be to process the radioactive and chemically complex waste found in the Site s 177 underground storage tanks Solid liquid and sludge like wastes are contained in 149 single and 28 double shelled steel tanks These wastes contain about one half of the curies of radioactivity and mass of hazardous chemicals found on the Hanford Site Therefore Hanford cleanup means tank cleanup

Safely removing the waste from the tanks separating radioactive elements from inert chemicals and creating a final waste form for disposal will require the use of our nation's best available technology coupled with scientific advances and an extraordinary commitment by all involved. The purpose of this guide is to inform the reader about critical issues facing tank cleanup. It is written as an information resource for the general reader as well as the technically trained person wanting to gain a basic understanding about the waste in Hanford's tanks: how the waste was created, what is in the waste, how it is stored, and what are the key technical issues facing tank cleanup. Access to information is key to better understanding the issues and more knowledgeably participating in cleanup decisions. This guide provides such information without promoting a given cleanup approach or technology use.
