Electromagnetic Fields in Mechatronics, Electrical and Electronic Engineering A. Krawczyk, S. Wiak, X.M.

Lopez-Fernandez, 2006-08-15 More and more researchers engage into investigation of electromagnetic applications especially these connected with mechatronics information technologies medicine biology and material sciences It is readily seen when looking at the content of the book that computational techniques which were under development during the last three decades and are still being developed serve as good tools for discovering new electromagnetic phenomena It means that the field of computational electromagnetics belongs to an application area rather than to a research area This publication aims at joining theory and practice thus the majority of papers are deeply rooted in engineering problems being simultaneously of high theoretical level The editors hope to touch the heart of the matter in electromagnetism The book focuses on the following issues Computational Electromagnetics Electromagnetic Engineering Coupled Field and Special Applications Micro and Special Devices Bioelectromagnetics and Electromagnetic Hazard and Magnetic Material Modeling

Design, Synthesis and Applications of One-Dimensional Chalcogenide Hetero-Nanostructures Tao-Tao Zhuang,2018-04-07 This thesis focuses on the design and synthesis of novel one dimensional colloidal chalcogenide hetero nanostructures for enhancing solar energy conversion applications Semiconducting nanomaterials are particular attractive for energy conversion due to the quantum confinement effects dictating their unique optical and electronic properties Steering the photo induced charge flow based on unique bandgap alignment in semiconductor heterojunctions is critical for photo electric chemical conversion The author presents the controllable preparation strategies to synthesize 1D chalcogenide hetero nanostructures with various fine structures further been used as excellent template materials for preparing other novel and complex hybrid architectures through a series of chemical transformations The heterogeneous growth mechanisms of novel hetero nanostructures is studied for developing a facile and general method to prepare more novel heterostructures The band gap structure simulations detailed charge carrier behaviour and unique solar energy conversion properties of the prepared hybrid nanostructures are deeply

investigated This work would open a new door to rationally designing hybrid systems for photo induced applications
