dramatic reductions in carbon dioxide emissions but is a relatively non distortionary policy instrument to raise revenue When the externalities of driving are considered an increased gasoline tax may not only be relatively non distortionary but even economic efficiency improving However I find that the welfare changes from an increased gasoline tax vary significantly across counties in California an important consideration for the political feasibility of the policy Finally I find suggestive evidence that the rebound effect of a policy that works only on the extensive margin such as a feebate or CAFE standards may be closer to zero than the elasticity of driving with respect to the price of gasoline This suggestive finding is particularly important for the analysis of the welfare effects of any policy that focuses entirely on the extensive margin Reducing Sulfur in Gasoline and Diesel Fuel United States.
