New Challenges in Applied Intelligence Technologies

Radoslaw Katarzyniak, 2008-06-17 To built intelligent systems that can cope with real world problems we need to develop computational mechanisms able to deal with very large amounts of data generate complex plans schedules and resource allocation strategies re-plan their actions in real time provide user friendly communication for human device interactions and perform complex optimization problems In each of these tasks intelligence technologies play an important role providing designers and creators with effective and adequate computational models The field of intelligence technologies covers a variety of computational approaches that are often suggested and inspired by biological systems exhibiting functional richness and flexibility of their natural behavior This class of technologies consists of such important approaches as data mining algorithms neural networks genetic algorithms fuzzy and multi valued logics rough sets agent oriented computation often integrated into complex hybrid solutions Intelligence technologies are used to build machines that can act and think like living systems solve problems in an autonomous way develop rich private knowledge bases and produce results not foreseen and programmed in a direct way by designers and creators

Developing Services for the Wireless Internet Maurizio Morisio, Marco Torchiano, 2007-10-16 Developing Services for the Wireless Internet offers state of the art technological knowledge and practical know how to practitioners project managers software architects and designers process engineers and quality assurance workers The book supports the developers of services and applications for mobile phones PDAs and smart phones This new emerging domain is characterized by a very fast pace of change in the underlying technology
