### PROGRAMMING EVENTS

The timer has the capacity for 8 ON/OFF events per day. Save program capacity by using available blocks of days.

With this option selected, timer will switch ON and OFF in a random pattern at least once in every 8 hours. (This may mean timer will switch OFF within a set ON period, or vice versa.) Ideal for use with a light — switching it ON and OFF automatically gives appearance of an occupied home, but not at exactly same time every day. To enter Random mode, press DAY and HOURS buttons simultaneously. An "R" will appear on display and unit will start random switching. If no programmed times are set, timer will switch ON or OFF approximately 1 minute after entering Random mode, then continue randomly. Flad, HARRY DIAMOND LABS ADELPHI MD., 1977 A digital electronic timer is described that uses the position of a potentiometer for time selection Upon activation of a power supply a counter in the timer is preset to the binary equivalent of the potentiometer setting and then proceeds to time out by counting from the preset state to

overflow The counting rate is determined by the frequency of a crystal controlled oscillator During the time interval up to and including the preset cycle the current drain of the circuit is 800 microamp at 5.5 V After completion of the preset operation the current consumption drops to 20 microamp at the reduced voltage of 3.6 V This low operating power makes it possible to use this circuitry in a fuze with a fluidic power supply wherein a charged capacitor could bridge a temporary power loss during projectile flight through apogee Although the system is described with a potentiometer as the input device the electronic part is not so limited This preset scheme can be used whenever the digital output from the counter can be converted into a single valued time varying function commensurate with a constant or quasi constant input quantity which is a function of the desired time delay
