

SABRE 4000

Hand-held trace detector for explosives, chemical agents, toxic industrial chemicals or narcotics

For those who need directly to probe if the public sector duty goes with a new challenge. Will you be faced with to stay? Strong is a word? It is proved package? Or not?

You need to have an instrument that can detect the widest range of substances. Smiths Detection is proud to introduce the most powerful of hand-held trace detectors – the SABRE 4000 – the only portable trace detector that can detect threats from explosives, chemical warfare agents, toxic industrial chemicals or narcotics.

The SABRE 4000 can detect and identify over 40 different chemical substances in approximately 10 seconds. With a cold start time of 10 minutes and weighing approximately 7 pounds including the lithium battery, the SABRE 4000 is a small, powerful ally to the war on terror and drug trafficking. With its a solid TFC detector capability, now features such as the 3.5" color TFT display and standard 4-hour battery, the SABRE 4000 is not the smallest, lightest, hand-held trace detector available. It is also the only one that can detect and identify all the threats facing you.

Trace Detection

A detection using the SABRE 4000 means that traces of a target substance have been found so that there is a threat. This in turn means that the user will be notified that there is contact with the identified substance and the appropriate action need to be taken.

Sample Collection

Proper sample collection is key to the success of any trace detector. The versatile SABRE 4000 is capable of analysing either trace particles or vapor samples, allowing the operator to apply the best sampling technique for the substance suspected. For example, most explosives and narcotic substances do not have a strong vapor signature and in the real world are very difficult to detect by vapor. Therefore, the most reliable collection method is a surface method for these substances in particle collection. The nature of chemical agents and toxic industrial chemicals make a vapor sampling more appropriate for these substances.

The SABRE 4000 is able to analyse either trace particles or vapor samples for the operator decide which sample collection method will yield the most accurate results.

This video module displays all three the typical identification of the status of the SABRE 4000 and an alarm screen.
