INTRODUCTION

The Zetron Model 38 Repeater Panel is a flexible, remotely programmable repeater tone panel that converts any station capable of duplex operation into a full featured repeater. The Model 38 is an ideal replacement for older card-per-user tone panels, eliminating time consuming trips to remote repeater sites as well as the high cost of individual tone cards for each customer.

With a Zetron Repeater Panel, a system operator can add or remove customers without traveling to the repeater site. Records of repeater system use may also be obtained with the touch of a key on the Zetron Model 88 Programmer/Timekeeper. Up to 60 different customers or user groups can be accommodated by a single Model 38. (With the 50 CTCSS/18 DCS option, up to 68 users can be accommodated.) The Zetron Model 38 is an ideal choice for retrofitting existing repeaters or developing new shared systems.

PERFORMANCE FEATURES

ToneLock, a Zetron exclusive, eliminates repeater talkdown or dropout resulting from weak, fading signals, high modulation levels, or poorly processed mobile transmitter audio. A ToneLock equipped Model 38 will recognize a CTCSS tone or digital code with a receiver quieting level of 3 dB SINAD. Typical programmable tone panels require a minimum of 8 dB SINAD before reliable tone decoding occurs. The Model 38 can even out perform traditional reed type decoders. The Model 38 will not false on adjacent tones, even when receiving CTCSS tones transmitted with a phase reversal.

The Model 38 is available at no extra charge with **50 CTCSS tones and 18 digital squelch codes**. This special software permits the use of the Model 38 in radio systems that use non-EIA CTCSS tones. This makes the Model 38 ideal for older radio systems that may use non-EIA tones.

The **Audio Quality** of the Model 38 is immediately obvious when upgrading older repeater panels or replacing other programmable panels.

POLITE OPERATION FEATURES

Courtesy Beeps tell users exactly when to begin talking. **Tailbips** (one beep per second) can occur during the repeater hold time.

The **Morse Code ID** means that users don't have to worry about providing station identification at regular intervals. The Morse code ID feature automatically transmits a user's call sign at the beginning of a transmission and at programmed intervals. An individual ID may be programmed for each user or a single system ID may be programmed for private carrier or cooperative applications.
