day's entry focuses on her walks and rambles through the woods and fields that she has known and loved for over thirty years. Along the way she discovers a long eared owl in a dense stand of conifers, tracks a bear through an early December snowfall, explains the life and ecological niche of the red backed vole and examines the recent arrival of an Asian ladybug. These are but a few of the tidbits sprinkled throughout the book, interwoven with the human stories of Bonta's family as well as the highway builders and shopping mall developers that threaten the idyllic peacefulness of her mountain. This is the fourth and final volume of Bonta's seasonal meditations on the natural history of the northern Appalachian Mountains. Her gentle, charming accounts of changing weather and of the struggles faced by plants, animals, and insects breathe new warmth into the coldest months of the year.

Wild Thoughts from Wild Places David Quammen, 2012-10-16 In *Wild Thoughts from Wild Places*, award-winning journalist David Quammen reminds us why he has become one of our most beloved science and nature writers. This collection of twenty-three of Quammen's most intriguing, most exciting, most memorable pieces introduces kayakers on the Futaleufu River of southern Chile, where Quammen describes how it feels to travel in fast company and flail for survival in the river's maw. Readers learn of the commerce in pearls and black market parrots in the Aru Islands of eastern Indonesia. Quammen even finds wildness in smog-choked Los Angeles embodied in an elusive population of urban coyotes too stubborn and too clever to surrender to the sprawl of civilization. With humor and intelligence, David Quammen's *Wild Thoughts from Wild Places* also reminds us that humans are just one of the many species on earth with motivations, goals, quirks, and eccentricities. Expect to be entertained and moved on this journey through the wilds of science and nature.

The Complete Home Learning Sourcebook Rebecca Rupp, 1998 Lists all the resources needed to create a balanced curriculum for homeschooling from preschool to high school level.

Flashes of Brilliance Anika Burgess, 2025-07-08 The story of the wildest experiments in early photography and the wild people who undertook them. Today it's routine to take photos from an airplane window, use a camera underwater, watch a movie, or view an X-ray. But the photographic innovations more than a century ago that made such things possible were experimental, revelatory, and sometimes dangerous, and many of the innovators, entrepreneurs, and inventors behind them were memorable eccentrics. In *Flashes of Brilliance*, writer and photo editor Anika Burgess engagingly blends art, science, and social history to reveal the most dramatic developments in photography from its birth in the 1830s to the early twentieth century. Writing with verve and an eye for compelling details, Burgess explores how photographers uncovered new vistas including catacombs, cities at night, the depths of the ocean, and the surface of the moon. She describes how photographers captured the world as

never seen before showing for the first time the bones of humans the motion of animals the cells of plants and the structure of snowflakes She takes us on a tour of astonishing innovations including botanist Anna Atkins and her extraordinary blue hued cyanotypes and the world's first photobook Eadweard Muybridge and tienne Jules Marey's famed experiments in capturing motion and their long legacy large format photography and photographs so small as to be invisible to the naked eye and aerial photography using balloons kites pigeons and rockets Burgess also delves into the early connections between photography and society that are still with us today how photo manipulation the art of fake images was an issue right from the start how the police used the telephoto lens to surveil suffragists and how leading Black figures like Sojourner Truth and Frederick Douglass adapted self portraits to assert their identity and autonomy Richly illustrated and filled with fascinating tales *Flashes of Brilliance* shows how the rise of a new art form transformed culture and our view of the world **Handbook of Weather, Climate, and Water** Thomas D. Potter,Bradley R. Colman,2003-08-11 This comprehensive two volume review of the atmospheric and hydrologic sciences promises to be the definitive reference for both professionals and laypersons for years to come Volume I addresses atmospheric dynamics physical meteorology weather systems and measurements while Volume II contains information on the climate system atmospheric chemistry hydrology and societal impacts **Critical Mass** Philip Ball,2004 In searching for answers the science writer Philip Ball argues that we can enlist help from a seemingly unlikely source physics The first person to think this way was the seventeenth century English philosopher Thomas Hobbes His approach described in *Leviathan* was based not on utopian wishful thinking but rather on Galileo's mechanics it was an attempt to construct a moral and political theory from scientific first principles Although his solution absolute monarchy is unappealing today Hobbes sparked a new way of thinking about human behavior in looking for the scientific rules of society Adam Smith Immanuel Kant Auguste Comte and John Stuart Mill pursued this same idea from different political perspectives **BOOK JACKET** *Technical Bulletin* ,1976 *Seasonal Snowpacks* Trevor D. Davies,Martyn Tranter,H. Gerald Jones,2013-06-29 *Seasonal Snowpacks* examines the processes which control the chemistry of seasonal snowcover and provides detailed information on the biogeographical distribution of snow e.g urban alpine snowpacks snow composition e.g micropollutants stable isotopes or the physical and biological processes which influence the chemical changes in snow e.g wind microbiological activity The fluxes of chemicals at the snow atmosphere and snow soil interfaces are examined as are processes which modify composition within the snowcover It is the first book in which the reader will find a comprehensive overview of the theoretical concepts latest measurement techniques process oriented research methods and models of studies in snow chemistry The linkages between snow chemistry atmospheric chemistry and hydrology will make this book of use to both research workers and students in the physical and biological sciences and to natural resource management personnel *The Presence of the Past* Rupert Sheldrake,2011-07-01 Rupert Sheldrake's theory of morphic resonance challenges the fundamental assumptions of modern science A world famous biologist Sheldrake proposes that all self

organizing systems from crystals to human societies inherit a collective memory that influences their form and behaviour. Rather than being ruled by fixed laws, nature is essentially habitual. All human beings draw upon a collective human memory and in turn contribute to it. Even individual memory depends on morphic resonance rather than on physical memory traces stored within the brain. Morphic resonance works through morphic fields which organize the bodies of plants and animals, coordinate the activities of brains and underlie mental activity. Minds are extended beyond brains both in space and time. This fully revised and updated edition of *The Presence of the Past* summarizes the evidence for Dr Sheldrake's controversial theory, reviews new research and explores its implications for biology, chemistry, physics, psychology and sociology. In place of the mechanistic worldview that has dominated biology since the nineteenth century, this book offers a revolutionary alternative and opens up a new understanding of life, minds and evolution.
