Environmental Vibrations: Prediction, Monitoring, Mitigation and Evaluation Hirokazu Takemiya, 2005-09-08 Globally there is much interest in environmental vibrations as caused by all forms of traffic by construction activities and factory operations and by other man made sources The focus is on prediction control and mitigation to benefit our quality of life and also to improve the operation of sensitive machines in high tech production The Japanese Geotechnical Society the Architectural Institute of Japan the Japanese Society of Civil Engineering and the Chinese Society for Vibration Engineering came together to organise this International Symposium on Environmental Vibrations at Okayama University from September 20th to September 22nd 2005 This book contains the proceedings of this meeting recording the international exchange of experience knowledge and research presented at the conference Both invited and submitted papers are included written by eminent academic professionals and engineering specialists It includes topical areas of environmental vibrations as well as referring to expertise and practices in related fields these include wave propagation in soils soil dynamics soil structure dynamic interaction field measurement of environmental vibration monitoring of environmental vibrations development of vibration mitigation measures evaluation of environmental vibrations effects of vibration on human perception effects of vibration on high precision machines Both the research community and professionals in the field of environmental vibrations will find this an excellent resource

Perceptual Coherence Stephen Handel, 2006-05-25 The goal of this book is to describe these conceptual similarities and differences between hearing and seeing Although it is mathematical and conceptually analytical the book does not make explicit use of advanced mathematical concepts Each chapter combines information on hearing and seeing and gives a detailed treatment of a small number of topics

BOOK JACKET *The Shock and Vibration Digest*, 1993 *Review of Activities*, 1954 *Personalizing Haptics* Hasti Seifi, 2019-06-15 This monograph presents a vision for haptic personalization tools and lays the foundations for achieving it Effective haptic personalization requires a suite of tools unified by one underlying conceptual model that can easily be incorporated into users workflows with various applications Toward this vision the book introduces three mechanisms for haptic personalization and details development of two of them into 1 an efficient interface for choosing from a large haptic library and 2 three emotion controls for adjusting haptic signals A series of quantitative experiments identifies five schemas engineering sensation emotion metaphor and usage examples for how end users think and talk about haptic sensations and characterizes them as the underlying model for the personalization tools *Personalizing Haptics* highlights the

need for scalable haptic evaluation methodologies and presents two methodologies for large scale in lab evaluation and online crowdsourcing of haptics While the work focuses on vibrotactile signals as the most mature and accessible type of haptic feedback for end users the concepts and findings extend to other categories of haptics Taking haptics to the crowds will require haptic design practices to go beyond the current one size fits all approach to satisfy users diverse perceptual functional and hedonic needs reported in the literature This book provides a starting point for students researchers and practitioners in academia or industry who aim to adapt their haptic and multisensory designs to the needs and preferences of a wide audience

Reviews Of Accelerator Science And Technology - Volume 3: Accelerators As Photon Sources

Alexander Wu Chao, Weiren Chou, 2011-01-20 Over the last half century we have witnessed tremendous progress in the production of high quality photons by electrons in accelerators This dramatic evolution has seen four generations of accelerators as photon sources The 1st generation used the electron storage rings built primarily for high energy physics experiments and the synchrotron radiation from the bending magnets was used parasitically The 2nd generation involved rings dedicated to synchrotron radiation applications with the radiation again from the bending magnets The 3rd generation currently the workhorse of these photon sources is dedicated advanced storage rings that employ not only bending magnets but also insertion devices wigglers and undulators as the source of the radiation The 4th generation which is now entering operation is photon sources based on the free electron laser FEL an invention made in the early 1970s Each generation yielded growths in brightness and time resolution that were unimaginable just a few years earlier In particular the progression from the 3rd to 4th generation is a true revolution the peak brilliance of coherent soft and hard x rays has increased by 7 10 orders of magnitude and the image resolution has reached the angstrom 1 10 10 meters and femto second 1 fs 10 15 second scales These impressive capabilities have fostered fundamental scientific advances and led to an explosion of numerous possibilities in many important research areas including material science chemistry molecular biology and the life sciences Even more remarkably this field of photon source invention and development shows no signs of slowing down Studies have already been started on the next generation of x ray sources which would have a time resolution in the atto second 1 as 10 18 second regime comparable to the time of electron motion inside atoms It can be fully expected that these photon sources will stand out among the most powerful future science research tools The physics community as well as the entire scientific community will hear of many pioneering and groundbreaking research results using these sources in the coming years This volume contains fifteen articles all written by leading scientists in their respective fields It is aimed at the designers builders and users of accelerator based photon sources as well as general audience who are interested in this topic
