

Space Exploration Synthesis Essay Example

Space exploration is a vitally important task that helps countries around the globe discover new things about the universe they are a part of and expand the knowledge of students in subjects such as science or Astronomy alike. There are several factors that are to be considered when contemplating the importance of space exploration. One of the debatable questions that comes to mind is how much money can be collected for the cause? Another is addressing the dangers that the astronaut occupation implies, because who doesn't remember learning about such devastating events like the explosion of the space shuttle Challenger in 1986? The final factor we must include when determining the importance of space exploration is the exposure of space exploration in the education system and why it is helpful to learn about historical space endeavors of our country, both its successes and disasters.

In regards to my mentioning the controversial topic of funding space travel for Americans, I feel it is important the point of view made by the author in document H. Roberts first lists personal statements about how he enjoys learning about space as much as an astronomer might. However he doesn't support the idea of deducting the required funds, to industrialize Mars, from Americans' taxpayer money. In other words, we are one earth for a reason. It'd be too much of a risk and complication to transport Americans over to the planet, when that ridiculous amount of money can go to something more important like education.

The possible dangers of planetary exploration are explained by Richard Greenberg who says that for astronauts there is "the hazard that some infectious extraterrestrial germ might be riding with them" (Source F) when they return home. Astronauts involved in NASA endeavors do not only trust the hundreds of space engineers that built the space shuttle, but they also possibly endanger themselves by exposing themselves to a plentiful amount of "alien" germs. Though, apparently, it is more likely for the humans to infect the "alien ecosystems" than the other way around.

Another major point to consider when discussing the importance of space exploration is the subject of educating the students and determining the benefit that it would provide for our nation. According to David Livingston, "It's not about what we learn out there in space, or about ourselves...It's about how we live here on Earth together and what type of future we want for ourselves and children" (Source A). This means that the journey of space exploration inspires the young to become something great in the future, thus making the world a better place.

Exploring the Unknown: Space and Earth Science , 1995 **Empiricist Theories of Space** Laura Berchielli, 2020-11-03 This book explores the notions of space and extension of major early modern empiricist philosophers especially Locke Berkeley Hume and Condillac While space is a central and challenging issue for early modern empiricists literature on this topic is sparse This collection shows the diversity and problematic unity of empiricist views of space Despite their common attention to the content of sensorial experience and to the analytical method empiricist theories of space vary widely both in the way of approaching the issue and in the result of their investigation However by recasting the questions and examining the conceptual shifts we see the emergence of a programmatic core common to what the authors discuss The introductory chapter describes this variety and its common core The other contributions provide more specific perspectives on the issue of space within the philosophical literature This book offers a unique overview of the early modern understanding of these issues of interest to historians of early modern philosophy historians and philosophers of science historians of ideas and all readers who want to expand their knowledge of the empiricist tradition Reconsidering Sputnik Roger D. Prologue ,1996 **Speeding-Up Radio-Frequency Integrated Circuit Sizing with Neural Networks** João L. C. P. Domingues,Pedro J. C. D. C. Vaz,António P. L. Gusmão,Nuno C. G. Horta,Nuno C. C. Lourenço,Ricardo M. F. Martins,2023-03-20 In this book innovative research using artificial neural networks ANNs is conducted to automate the sizing task of RF IC design which is used in two different steps of the automatic design process The advances in telecommunications such as the 5th generation broadband or 5G for short open doors to advances in areas such as health care education resource management transportation agriculture and many other areas Consequently there is high pressure in today s market for significant communication rates extensive bandwidths and ultralow power consumption This is where radiofrequency RF integrated circuits ICs come in hand playing a crucial role This demand stresses out the problem which resides in the remarkable difficulty of RF IC design in deep nanometric integration technologies due to their high complexity and stringent performances Given the economic pressure for high quality yet cheap electronics and challenging time to market constraints there is an urgent need for electronic design automation EDA tools to increase the RF designers

productivity and improve the quality of resulting ICs In the last years the automatic sizing of RF IC blocks in deep nanometer technologies has moved toward process voltage and temperature PVT inclusive optimizations to ensure their robustness Each sizing solution is exhaustively simulated in a set of PVT corners thus pushing modern workstations capabilities to their limits Standard ANNs applications usually exploit the model s capability of describing a complex harder to describe relation between input and target data For that purpose ANNs are a mechanism to bypass the process of describing the complex underlying relations between data by feeding it a significant number of previously acquired input output data pairs that the model attempts to copy Here and firstly the ANNs disrupt from the most recent trials of replacing the simulator in the simulation based sizing with a machine deep learning model by proposing two different ANNs the first classifies the convergence of the circuit for nominal and PVT corners and the second predicts the oscillating frequencies for each case The convergence classifier CCANN and frequency guess predictor FGANN are seamlessly integrated into the simulation based sizing loop accelerating the overall optimization process Secondly a PVT regressor that inputs the circuit s sizing and the nominal performances to estimate the PVT corner performances via multiple parallel artificial neural networks is proposed Two control phases prevent the optimization process from being misled by inaccurate performance estimates As such this book details the optimal description of the input output data relation that should be fulfilled The developed description is mainly reflected in two of the system s characteristics the shape of the input data and its incorporation in the sizing optimization loop An optimal description of these components should be such that the model should produce output data that fulfills the desired relation for the given training data once fully trained Additionally the model should be capable of efficiently generalizing the acquired knowledge in newer examples i e never seen input circuit topologies International Handbook of Research on Environmental Education Robert B.
