Antenna and Wave Propagation Ashish Mathur, Ranjana Trivedi, G.B. Mathur, 2011-01-01 This book is designed for the final year students in electronics and communication and for the first year post graduate students in Digital Communication and allied subjects. This compact and comprehensive text fulfils the long felt need for a suitable text book in the area of Antenna and wave Propagation. It is written as per the revised syllabus of Rajasthan Technical University RTU Kota. It covers the topics of fundamentals of antenna types of antenna arrays radio propagation modes with basics of IE3D software and advance antenna topics. This well organized text lays emphasis on all the modes of propagation and practical aspects of antenna with worked out examples. Further previous year solved paper are included topic wise which would be of considerable assistance to the reader. This comprehensive book covering all aspects of antenna and wave propagations should prove to be an invaluable asset to both students professionals. Features According to the syllabus prescribed by Rajasthan Technical University RTU Kota Including previous year s university papers Precise definitions and clear exposure of fundamental concepts Simple and easy explanation of the topics along with well labelled diagrams Step by step procedure is followed for explaining the topics Detailed coverage of advance antennas helpful for the post graduation students The recent applications of antenna are also summarized here again proving fruitful for the M Tech Students IE3D software basic is been included for the purpose of dissertation for M Tech Students Ideally suitable for self study

Compact Slot Array Antennas for Wireless Communications Alan J. Sangster, 2018-11-11 This book describes and provides design guidelines for antennas that achieve compactness by using the slot radiator as the fundamental building block within a periodic array rather than a phased array. It provides the basic electromagnetic tools required to design and analyse these novel antennas with sample calculations where relevant. The book presents a focused introduction and valuable insights into the relevant antenna technology together with an overview of the main directions in the evolving technology of compact planar arrays. While the book discusses the historical evolution of compact array antennas its main focus is on summarising the extensive body of literature on compact antennas. With regard to the now ubiquitous slot radiator it seeks to demonstrate how despite significant antenna size reductions that at times even seem to defy the laws of physics desirable radiation pattern properties can be preserved. This is supported by an examination of recent advances in frequency selective surfaces and in metamaterials which can if handled correctly be used to facilitate physics defying designs. The book offers a valuable source of information for communication systems and antenna design engineers especially thanks to its overview of trends in compact planar arrays yet will also be of interest to students and researchers as it provides a focused introduction and insights into this highly relevant antenna technology

Antenna Patterns from Single Slots in Carbon Fibre Reinforced Plastic Waveguides, 2010 Slotted Waveguide Antenna Stiffened Structure SWASS is a type of conformal load bearing antenna where top hat cross section stiffeners on skins or blade stiffeners in sandwich panels serve the dual purpose of acting both as structural stiffeners and as waveguides Cutting slots through the outer skin and into these waveguide stiffeners creates slotted waveguide antenna arrays Two of the key requirements for SWASS are adequate antenna performance and the capability to design SWASS antenna arrays The first step toward this goal and the subject of this report was to satisfy these requirements for single slot antennas Eight 100 mm long waveguide antennas with internal cross section of 22.86 mm x 10.16 mm and a single slot were manufactured from aerospace grade carbon fibre reinforced plastic CFRP Two slotted waveguides antennas were also manufactured from copper rigid rectangular WR 90 waveguide Antenna gain in the bore sight direction from 8 to 12 GHz and the E and H plane antenna pattern at 10 GHz were measured for each slotted waveguide The radiation pattern of CFRP antennas was similar to that of copper antennas with approximately 3 dB reduction in gain Measured behaviour correlated well with the predictions made using CST Microwave Studio Discrepancies of up to 2 dB occurred at frequencies above 10 GHz It is concluded that losses due to the finite conductivity of CFRP are acceptable for first generation SWASS and simulation accuracy is sufficient for initial array design
