Sounds in Sentences				

Performance Analysis: GPTA-2

STUDENT's articulation skills were formally assessed using the GELA₂. Assessment targets in the initial, middle and final positions of the word were elicited in single-word utterances and in sentences. To collect data in single-word utterances, **STUDENT** was presented with 48 colored pictures and was asked to name them spontaneously. During this task, **STUDENT** exhibited **X** speech errors and obtained a standard score of **X**. To collect data at the sentence level, **STUDENT** participated in sentence repetition tasks. During sentence repetition tasks **STUDENT** exhibited **X** speech errors and obtained a standard score of **X**.

Below is a table representative of the single word errors **STUDENT** exhibited during administration of the Sounds in Words subtest. The table also indicates the state's designated age at sound acquisition.

Error Type	Initial Position	Middle Position	Final Position	Designated Age at Acquisition (Years; Months)
Substitution				
Omission	Decrease Font Size			
Distortion				
Addition				

STUDENT's single word errors consisted of substitutions/omissions/distortions/additions. **STUDENT's** single word errors were compared to the state of Missouri's normative data for sound acquisition. The state of Missouri's normative data for sound acquisition suggests that the **X** phonemes are typically acquired by **X** years of age. **STUDENT's** word production of these phonemes was not considered developmentally appropriate at **STUDENT's** chronological age level of **X** years, **X** months. The evaluating speech-language pathologist determined that **STUDENT's** errors are not the result of dialectal differences or second language influence.
